(IF APPLICATION HAS BEEN FILED, CASE NUMBER
MUST BE INDICATED REGARDLESS OF DATE OF INJURY)

SUBPOENA DUCES TECUM

(When records are mailed, identify them by using the
above Case No. or attaching copy of the subpoena.)

NO PERSONAL APPEARANCE NECESSARY

Please refer to the In Bold summary description
found below to identify the documents requested by
this Subpoena

*The People of the State of California Sends Greetings to: **Custodian Of Records***

UCI MEDICAL CENTER - MEDICAL RECORDS

WE COMMAND YOU to appear before A NOTARY PUBLIC

At ONTELLUS, 27450 Ynez Road, Suite 300, Temecula, CA 92591-4680

On the 10th day of February, 2023, at 9 o'clock A. M. to testify in the above-entitled matter and to bring with you and
produce the following described documents:

**ANY AND ALL MEDICAL/TREATMENT RECORDS PERTAINING TO THE CARE, TREATMENT AND EXAMINATION OF CLAIMANT/APPLICANT REGARDLESS
OF TIME PERIOD WHEN SERVICES WERE RENDERED. ***INCLUDING RECORDS OF UCI OUTPATIENT SURGERY AND DR NAVEEN BHANDARKAR*****

(Do not produce X-rays unless specifically mentioned above.)

For failure to attend as required, you may be deemed guilty of a contempt and liable to pay to the parties aggrieved all losses and amages
sustained thereby and forfeit one hundred dollars in addition thereto.

This subpoena is issued at the request of the person making the declaration on the reverse hereof, or on the copy which is served herewith.

Date 01/26/2023

**WORKERS' COMPENSATION APPEALS BOARD
OF THE STATE OF CALIFORNIA**

Suzanne M. Banks

Workers Compensation Judge

**Records copied and submitted to the designated
court by ONTELLUS will be deemed as full
compliance with this Subpoena.**

FOR INJURIES OCCURRING ON OR AFTER JANUARY 1,
1990 AND BEFORE, JANUARY 1, 1994:

If no Application for Adjudication of Claim has been filed, a declaration
under penalty of perjury that the Employee's Claim for Workers'
Compensation Benefits (Form DWC-1) has been filed pursuant to Labor
Code Section 5401 must be executed properly.

SEE REVERSE SIDE

[SUBPOENA INVALID WITHOUT DECLARATION]

CC: NATALIA FOLEY ESQ
295923

Order Ref #: 1957156

You may fully comply with this subpoena by mailing the records described (or authenticated copies, Evid Code 1561) to the person and place stated
above within ten (10) days of the date of service of this subpoena.

This subpoena does not apply to any member of the Highway Patrol, Sheriff's Office or City Police Department unless accompanied by notice from
this Board that deposit of witness fee has been made in accordance with Government Code 68097.2 et seq.

DECLARATION FOR SUBPOENA DUCES TECUM

Case No.: ADJ15547702

STATE OF CALIFORNIA, County of RIVERSIDE

The undersigned states:

That he / she is (one of) the representative(s) for the defendant in the action captioned on the reverse hereof.

That UCI MEDICAL CENTER - MEDICAL RECORDS has in his / her possession or under his / her control the documents described on the reverse hereof. That said documents are material to the issues involved in the case for the following reason:

To determine present and/or past physical condition; nature, extent and duration of sickness; injury, disability and/or necessity of further treatment.

Declaration for Injuries on or After January 1, 1990 and before January 1, 1994

That an Employee's Claim for Workers' Compensation Benefits (DWC Form 1) has been filed in accordance with Labor Code Section 5401 by the alleged injured worker whose records are sought, or if the worker is deceased, by the dependant(s) of the decedent, and that a true copy of the form filed is attached hereto. (Check Box if applicable and part of declaration below, See instructions on front of subpoena.)

I declare under penalty of perjury that the forgoing is true and correct.

Executed on 01/26/2023, at Temecula, California

CC: sinus follow up

HPI: 69 year old male presenting for follow up of chronic sinusitis with polyposis s/p bilateral endoscopic sinus surgery. Current medical therapy for treatment includes nasal steroid spray. He stopped saline irrigations due to significant discomfort and increased headaches, but states was performing hypertonic (2 salt packets). Frontal headaches have been overall substantially improved - only 3-4 major episodes following surgery, and much milder and less frequent, with morning headaches located across upper forehead and temple, but not present during the majority of the day. He saw Dr. Lin for possible migraine vestibular involvement and hearing loss with recommendations provided. He denies fever, shortness of breath, severe epistaxis, vision change, or chest pain.

Past, family, and social histories and a directed ROS were reviewed since the prior evaluation and other than noted above were unchanged.

Medications:

amlODIPne 5 mg oral tablet 1 tab(s) orally once a day
aspirin 81 mg oral tablet 1 tab(s) orally once a day
atenolo1 50 mg oral tablet 1 tab(s) orally once a day

Allergies:

Reglan -> Other reaction

Vital Signs:

• **Body Measurements:** Data referenced from "Ambulatory Intake Note-OP Otolaryngology" 04/22/2015 12:52
Height: 5'8 | Weight: 174 lbs | Weight: 78.925 kgs | BSA: 1.95 | BMI: 26.5

Physical Exam:

• **Details:**

Nose: Anterior rhinoscopy demonstrates crusting in middle meatus bilaterally, endoscopic debridement indicated for post surgical routine evaluation and treatment, documented below.

Procedure Note: Nasal endoscopy with debridement, bilateral
Indication: Post-surgical sinus crusting, evaluate ostial patency

Amb Follow Up Note, ENT

04/22/2015 13:02

BHANDARKAR, NAVEEN D (MD (A))

Description: Risks, benefits, and alternatives were discussed and questions were answered. The patient elected to proceed. Topical anesthesia (4% lidocaine) and decongestant (phenylephrine) were applied to the intranasal and sinus mucosa and allowed to act for a period of at least 10 minutes for full effect. The rigid scope was then utilized for visualization.

Findings: residual crusting removed from middle meatus and frontal outflow on left side, remnant implant removed. right middle meatus clear with no crusting, small bony fragments around basal lamella and posterior ethmoid excised. mucosal completely healed. no evidence of polyps or significant edema. no purulent drainage. all ostia patent.

Assessment and Plan:

1. Chronic sinusitis with polyps, disease significantly improved s/p endoscopic sinus surgery. no recurrent polyps.
2. Residual frontal headaches unrelated to sinusitis

- Attempt modifying saline concentration for improved tolerance
- Continue nasal steroid spray for anti inflammatory management
- Consider neurology evaluation for residual headaches - patient will assess further occurrences and decide
- RTC 2-3 months for surveillance of chronic sinusitis with polyps

Who referred you to us? Dr.
Address _____
Tel: _____ Fax: _____

What brings you to see us (be brief)? _____
When did the problem start? hearing difficulty
Where or which side? Right Side
Severity (on a scale of 0 to 10, where 0 is none, and 10 is most severe?) (4)
When does it occur? 30-45 sec
How long does it last? _____
Is it getting: (please check) better _____ Same as before _____ worse ✓
What makes it better? Atank
What makes it worse? _____
Any associated symptoms? _____

In the past 3 months, have you had any of these (circle all that apply)

- | | | | |
|-------------------------|----------------------|-------------------|--------------------------------|
| Fever | Hearing loss | Sore in mouth | Difficulty swallowing |
| Chills/Night Sweats | Dizziness (spinning) | Sore throat | Difficulty breathing thru nose |
| Chest pain | Ringing in ears | Lump in Neck | Seasonal allergies |
| Blurry vision | Ear drainage | Hoarseness | Heartburn |
| Nasal drainage | Sneezing | Palpitations | Easy bruising/bleeding |
| Joint pain | Depression | Anxiety | Skin Rash |
| Nausea/vomiting | Lung problem | Kidney problems | Blood clots in vein |
| Weakness in arms/legs | Too cold/warm | Bleeding problems | Weight gain/loss |
| Tingling in arms/legs | Dry eyes/mouth | Heart Murmur | Difficulty Walking 2 blocks |
| Slow to heal after cuts | Hepatitis | Black Stools | Food sticking in throat |

Do you have any medical problems? Headache

Have you had any surgeries before? Please state date. yes 1986 cholecystectomy
2015 Sinus

Any medical problems run in the family? NO

Are you (Circle one): Employed, (occupation) M-D Student Not Working Retired
Do you smoke, or ever smoke? NO How much per day? _____ For how long? _____ If quit, when? _____
Do you drink alcohol? yes How many drinks per week do you drink? occasional
Do you use any recreational drugs? NO

Please list your current medications (*including over the counter and herbal supplements*) you may provide a list to the nurse:

Name	Dose	Frequency	Name	Dose	Frequency
1. <u>Atenolol</u>	<u>50mg</u>		5.		
2. <u>Amlo d ipin</u>	<u>5mg</u>		6.		
3.			7.		
4.			8.		

Are you allergic to any medications? Please list and describe the kind of reaction do you get yes - Reglan -> EPS

How tall are you? 5'8" How much do you weigh? 174
Reviewer Initials/Date 4/13/15

Amb End of Visit Summary, UCI

04/13/2015 14:01

REYNOLDS, MACKENZIE (MA)

It is important to your health to take any medications as prescribed by your providers.
Please bring your current medication list to each medical appointment, including any over the counter medications and supplements.
Follow any recommendations for healthy diet and activity as prescribed by your provider and health team.
Keep all follow up appointments and obtain any tests that your provider has ordered or recommended.
If recommended by your provider, keep a log or record of health indicators such as your blood pressure, weight, or blood sugar level; bring these records to your appointments to review with your provider.
Ask your primary care provider if you are due for any preventive tests or immunizations.
Please refer to the Follow My Health Patient Portal to view your personal health record, and a complete summary of your visit. The portal is located at:

<https://www.ucirvinehealth.org/FollowMyHealth>.

Demographics:

Please review the following information about yourself, and let us know if corrections are needed Race: Other
Ethnicity: Non-Hispanic

RE: Adel Hanna
DOB: 03-29-1946
DOS: April 13, 2015

Dear Dr. Naveen D Bhandarkar,

Thank you for the kind consultation on your patient. As you may recall, the patient is a 69 year old with a history of bilateral hearing loss for many years.

Microscopic examination of the ears was normal. The audiogram shows mild to severe downsloping SNHL with 40-44% speech discrimination.

My assessment is that of 69 year old male with mild to severe SNHL AU and poor speech discrimination. We spoke about the utility and limitations of hearing aids and about cochlear implants. He is interested in trying at least 1 maybe 2 hearing aids at this time. If it provides him benefit, he will continue to use them. If he feels like they are of no benefit, he will contact us for a cochlear implant evaluation.

I will keep you updated. Thank you again for the very kind consultation on this very interesting patient.

Sincerely,

Harrison W. Lin, MD
Assistant Professor of Otolaryngology-Head & Neck Surgery
Division of Otolaryngology & Skull Base Surgery

CC: Hearing loss

HPI: 69 year old male, kindly referred for consultation by Dr. Bhandarkar, presents with a long history of AU hearing loss. He reports that he has had tremendous difficulty understanding speech and difficulty listening environments, especially in conference rooms with large degree of echo. His wife reports that he turns on the TV very loudly and that when she calls him from behind he does not even acknowledge that he is being called. No otalgia, no otorrhea, no vertigo, mild tinnitus, no aural fullness, no facial nerve symptoms.

He did report that he has some degree of dizziness at one point to Dr. Bhandarkar, however he feels that his migraine headaches are not of inner ear origin or relation. The dizziness episode was only 1 time and he believes to be and orthostatic hypotension episode after an additional antihypertensive medication was started.

Review of Systems

Negative except as per HPI.

Past Medical History

Migraine headaches
HTN

Past Surgical History

Cholecystectomy 1986
ESS 2015

Social History

Patient Education, Instructions, and Goals:

General Instructions for Your Good Health:

It is important to your health to take any medications as prescribed by your providers. Please bring your current medication list to each medical appointment, including any over the counter medications and supplements.
Follow any recommendations for healthy diet and activity as prescribed by your provider and health team. Keep all follow up appointments and obtain any tests that your provider has ordered or recommended. If recommended by your provider, keep a log or record of health indicators such as your blood pressure, weight, or blood sugar level; bring these records to your appointments to review with your provider. Ask your primary care provider if you are due for any preventive tests or immunizations. Please refer to the Follow My Health Patient Portal to view your personal health record, and a complete summary of your visit. The portal is located at:

<https://www.ucirvinehealth.org/FollowMyHealth>.

Demographics:

Please review the following information about yourself, and let us know if corrections are needed Race: Other

CC: sinus follow up

HPI: 69 year old male presenting for follow up of chronic sinusitis with polyposis s/p bilateral endoscopic sinus surgery. Current medical therapy for treatment includes saline irrigations, post op steroid/abx. Symptoms have been overall reasonably well controlled following surgery. He reports some bloody clots persisting up until today but decreasing. Frontal headaches have been overall improved - nearly gone on the right side, persistent but not as severe overall on the left. He has not had as much dysequilibrium. He denies fever, shortness of breath, severe epistaxis, vision change, or chest pain.

Past, family, and social histories and a directed ROS were reviewed since the prior evaluation and other than noted above were unchanged.

Medications:

acetaminophen-HYDROcodone 325 mg-5 mg oral tablet 1-2 tabs orally every 4 to 6 hours as needed for pain
amLODIPine 5 mg oral tablet 1 tab(s) orally once a day
amoxicillin-clavulanate 875 mg-125 mg tablet 1 tab(s) orally every 12 hours x 21 days ; recommend daily probiotic or yogurt while on therapy
aspirin 81 mg oral tablet 1 tab(s) orally once a day
atenolol 50 mg oral tablet 1 tab(s) orally once a day
predniSONE 10 mg tablet 4 tab orally once a day x 4 days;
3 tab orally once a day x 4 days;
2 tab orally once a day x 4 days;
1 tab orally once a day x 4 days

Allergies:

Reglan -> Other reaction

Physical Exam:

• **Details:**

Nose: Anterior rhinoscopy demonstrates crusting in middle meatus bilaterally. endoscopic debridement indicated for post surgical routine evaluation and treatment, documented below.

Amb Follow Up Note, ENT

04/07/2015 09:18

BHANDARKAR, NAVEEN D (MD (A))

Procedure Note: Nasal endoscopy with debridement, bilateral

Indication: Post-surgical sinus crusting, evaluate ostial patency

Description: Risks, benefits, and alternatives were discussed and questions were answered. The patient elected to proceed. Topical anesthesia (4% lidocaine) and decongestant (phenylephrine) were applied to the intranasal and sinus mucosa and allowed to act for a period of at least 10 minutes for full effect. The rigid scope was then utilized for visualization.

Findings: extensive crusting removed from bilateral middle meatus and sinus ostial regions. right steroid eluting stent removed, decrusted, and replaced. frontal ostium widely patent. all other sinus ostia also patent. edema minimal, no purulence. similar findings on left side - steroid stent in place in left frontal, left in place after discussion of possible removal.

Data Review:

▪ **Results**

Histology from sinus surgery

FINAL DIAGNOSIS AFTER MICROSCOPY:

SINUS CONTENTS, BILATERAL, EXCISION:

- FRAGMENTS OF POLYPOID SINONASAL MUCOSA WITH EDEMA, FIBROSIS AND CHRONIC INFLAMMATION.
- FRAGMENTS OF BONE

▪ **Assessment and Plan:**

1. Chronic sinusitis with polyps, disease significantly improved s/p endoscopic sinus surgery
2. Frontal headaches, likely in part due to sinusitis, may have concurrent neurologic origin; consider vestibular migraine

- Continue saline irrigations multiple times daily - increase to at least 5 times daily to minimize crusting
- Restart nasal steroid spray for anti inflammatory management
- Finish perioperative steroids / antibiotics to completion
- Proceed with consultation with Dr. Lin for possible vestibular migraine contributing to headache
- Patient understands that headaches may be multifactorial in origin and sinus optimization alone may not result in complete improvement - decrease in severity at this time encouraging, will carefully follow, still healing from surgery Patient will notify of any worsening.

DIAGNOSTIC IMAGING REPORT

Patient: Hanna, Adel Sex: F DOB: Mar 29, 1946 Age: 68 Diag. Imaging # 1990772
Status: Outpatient
Referring Physician: Naveen Bhandarkar

Exam # 8578313 - Mar 18, 2015 - CT - SINUS STUDY (COMPLETE)

Exam Performed at SimonMed California Irvine

HISTORY: Chronic sinusitis.

COMPARISON: None.

TECHNIQUE: 1 mm thickness images of the paranasal sinuses were obtained with no contrast administration.

Radiation dose: CTDI volume equals 21.15 mGy and DLP equals 350 mGy-cm.

FINDINGS:

There is moderate mucosal thickening of the left frontal sinuses and left frontoethmoidal junctions. Mild mucosal thickening of the inferior aspect of the right frontal sinus and right frontoethmoidal junction.

Moderate to severe mucosal thickening of ethmoidal air cells.

Sphenoid sinus and frontoethmoidal recesses are clear.

Moderate mucosal thickening of bilateral maxillary sinuses. There are additional drainage passway of the maxillary sinuses to the inferior aspect of bilateral nasal cavity. If there has not been prior sinus surgery the findings are likely anatomical variation. Ostiomeatal units are moderately narrowed by mucosal thickening however they are patent.

Right carotid canal is dehiscant in to the sphenoid sinus. The lamina papyracea are intact. The roofs of the ethmoid air cells are symmetric. The optic canals are well covered by bone. Nasal septum is in the midline.

The visualized mastoid air cells are clear. Visualized part of the brain and orbits and globe are unremarkable. Visualized overlying soft tissues are unremarkable.

TIME: OTOLARYNGOLOGY

IMPRESSION:

Severe mucosal thickening of ethmoidal air cells and left frontal sinus and frontoethmoidal junction and moderate mucosal thickening of bilateral maxillary sinuses. The remainder of the paranasal sinuses are relatively clear.

Accessory drainage passways of the inferomedial walls of of bilateral maxillary sinus into the nasal cavity. Findings are likely related to prior surgery otherwise they may be developmental.

Care Plan

Category	Item
Alteration in Temperature - Plan/Interventions:	Cover with warm blankets as needed. Cover head with cap; Regulate the room temperature; Add warm solutions to the operative field as needed; Use hyperthermia or forced air warming blankets as needed Comments: Expected Outcome: The patient will maintain a minimum postoperative body temperature of 35.5 degree C.
Safety measures:	Verify patient identification; Verify surgical procedure and site with patient; Use safety straps or otherwise secure the client to the OR bed; Pad all potential pressure areas; Apply electrosurgical grounding pad per department policy; Assure that all equipment works and its maintained properly; Maintain side rails in the up position during transportation Comments: Expected Outcome: The patient will be free of injury.
Risk for Infection - Plan/Interventions:	Apply appropriate skin preparation; Enforce strict aseptic technique; Aseptic technique implemented; Monitor break in technique and take corrective action Comments: Expected Outcome: Patient will remain free of infection.
Risk for Injury Related to Fire Risk - Plan/Intervention:	Observe prep drying times (minimum of 3 minutes; Protect heat sources (cautery pencil holster, utilize standby mode, etc.); Follow standard draping procedure; Score patient on Fire Risk using questionnaire Comments: Outcomes: Patient remains free of Injury

Complications

None apparent

Medical Imaging

X-Ray

Chest X-Ray 3/18/15 quest

Comments:

Findings/

Impression: There is elevation of right hemidiaphragm, mild blunting of right costophrenic angle and right inferior lateral pleural thickening. No pneumonia or edema or left effusion is identified. The cardiac silhouette appears mildly enlarged and the aorta is tortuous and ectatic. There is questioned osteopenia and degenerative changes in thoracic spine. Surgical clips and gaseous distention in upper abdomen on lateral view.

NPSG Pre Procedure Verification OR Nurse

Date/Time	Item
	Allergies listed in medical record -- Allergy band present; Yes
	NPO status has been verified with patient -- Yes - on record
	Patient identified (2 required) -- Name; ID Band; Medical Record; DOB
	Requested diagnostic&radiology test results are available and properly labeled -- Yes
	Required blood products,implants,devices or special equipment needed -- Yes
	Signed procedure consent form accurately completed -- Yes
	Surgical procedure/site verified with (all required) -- Surgery Schedule; Medical Record; Consent; Patient
	Surgical side/site verified and marked by LIP or designee -- N/A bilateral

Care Plan

Date/Time	Item
03/30/2015 10:32	Anxiety - Plan/Interventions: Assess and document baseline physical data; Include: BP, temperature, pulse, respiration, allergies; NPO status and potential complication factors
Comments:	Expected Outcomes: Patient verbalizes decreased feeling of uneasiness, and relaxed body posture.
03/30/2015 10:32	Knowledge Deficit - Plan/Interventions: Introduction to OR staff; Encouraged questions/answers regarding operative routine; Provided interpreter during surgery as needed; Greet patient by name; Verify patient identification; Verify surgical procedure and site with patient; Assess readiness to learn; Identify barriers to learning; Provide for a quiet, comfortable atmosphere; Expose patient only as necessary; Encourage questions; Observe/assess verbal and non-verbal behavior; Incorporated religious preferences; Explain use of oxygen and need for coughing and deep breathing; Explain the need for nausea control; Review post-op instructions; Length of stay in PACU; Pain assessment and pain management techniques
Comments:	Expected Outcomes: The patient demonstrates understanding by verbalizing knowledge of care, and of how pain will be assessed.

PACU Assessment

Date/Time:	Category	Item Selected
03/30/15 13:02	Assessment	Initial Assessment
03/30/15 13:02	Neurological	Alert/Oriented; PERL 2.5mm; Follows Commands; CNS Checks
03/30/15 13:02	Pain	Patient denies pain
03/30/15 13:02	Cardiovascular	Heart Sounds Assessed; Extremities Warm & Pink; Peripheral Pulses Present & Strong Bilaterally; IV Sites Patent & Healthy - Site: left hand
03/30/15 13:02	EKG	Monitor alarms on/Limit set; BPM/HR limits reviewed and posted; Normal sinus rhythm
03/30/15 13:02	Respiratory	Respirations regular, symmetrical; Breath sounds equal & clear all lobes; Oxygen mask in place
03/30/15 13:02	Neuromuscular	Able to raise head; Move all extremities equally
03/30/15 13:02	Nutritional/Metabolic	Skin warm and dry; Dressing dry and intact; Site: nasal
03/30/15 13:02	GI	Abdomen soft, non distended
03/30/15 13:02	GU	Not voided; Denies need to void
03/30/15 13:02	Miscellaneous	Patient ID Band On; Allergy Band On; Sequential Compression Device on

Care Plan

Category	Item
Risk for Injury - Plan/Interventions:	Side rails up; Wheels locked; Patient remains free of injury Comments: Expected Outcomes: Patient remains free of injury.
Knowledge Deficit - Plan/Interventions:	Review post-op instructions; Encouraged questions/answers regarding operative routine; Encourage deep breathing; Going home instructions given to patient/family; Teach importance of hand washing; Medication Teachings/Education; Verify patient identification; Greet patient by name Comments: Expected Outcomes: Patient verbalizes understanding, return demo given.
Pain Management - Plan/Interventions:	Warm blankets applied; Medication administration - IV; Explained purpose of medication; Position change; Verbalizes current level of pain; Assessed for pain; Written instructions provided Comments: Expected Outcomes: Verbal or non-verbal expression of reasonable comfort from patient, verbalizes current level of pain.
Risk for Injury - Evaluation:	Patient remains free of injury
Knowledge Deficit - Evaluation:	Verbalizes understanding; Patient demonstrates understanding of care; risk for post-op infection
Pain Management - Evaluation:	verbalizes current level of pain; Verbal or non-verbal expression of reasonable comfort

Clinic Staff Lynette Date 3-18-15 Time 10:00 AM

I have discussed with the patient the following items: Use N/A if Not Applicable

1. Surgery date and time	
2. PreOp Clinic visit date and time	<u>N/A</u>
3. Importance of NPO	
4. Surgical Procedure	
5. Advance Directives	
6. Blood Outlets	
7. Allergies	
8. Need for driver (OP OSS)	
9. Bring insurance cards to PreOp visit	
10. No jewelry or valuables	
11. Verify address and phone numbers	
12. PreOp brochure reviewed	
13. Review day of surgery	
14. Pain management	
15. Post Operative home care needs (DME type)	
16. PreOp xray procedure	
17. Bowel prep	
18. Crash training	
19. Patient teaching	
20. Patient Safety Education	
- Review surgery specific information	
- Surgical site infection prevention	
- Central line infection prevention teaching	
- Antiseptic patient preoperative shower teaching	
- Anesthesia pre-op instructions given	
- Check patient is on safety measure relative to return identification	
- Patient is called to our safety measure relative to surgical site marking	
21. Written materials given:	
22. Miscellaneous	
23. Education classes referred	

I understand the information and my responsibility for ongoing health care needs.

For ordering by CPC

PPCU Nurse Signature: *Emilia B.* Date/Time: *3/30/15 10:15*
 Provider's Signature: *Hanna Adel* Date/Time: *3/30/15 10:15*
Call assigned anesthesia team on day of surgery for questions or clarification.

MEDICATIONS:
 Midazolam _____ mg IV Push x 1 dose
 5 mg/ml _____ mg po in _____ ml
 In cherry syrup x1
 to be given at _____ on _____ x1 on call to OR
 Scopolamine Transdermal Patch 1.5 mg x1 now
 Bicitra 30 ml po x1 dose

PERIOPERATIVE SURGICAL HOME:
 Scopolamine Transdermal Patch 1.5 mg x1 now (high risk for PONV)
 Acetaminophen 1000 mg po x 1
 Celecoxib* Avoid if Sulfa or NSAID allergy, No GI bleed or CABG
 200 mg po x1 (wt <50kg) 400 mg po x1 (wt >50kg)
 *If pt allergic to Sulfa, use Etodolac 500 mg po x1
 Gabapentin (chronic pain)
 300 mg po x1 (wt <100 kg) 600 mg (wt >100 kg)
 Oxycodone SR
 20 mg po x1
 10 mg po x1 if opioid naive, >70 yrs. old, or wt <50 kg
 Alvimopan 12 mg po x1 now
 Other med: _____
 Other: _____

IV FLUIDS:
 LR 1000 ml at TKO ml/hr No IV
 Other IV _____ at _____ ml/hr

LABORATORY:
 Urine pregnancy test
 Other: _____

DIABETIC MANAGEMENT:
 Finger-stick glucose on admission for all diabetics.
 Follow Adult Diabetic Protocol - see below.*

For ordering Day of Surgery

Blood Glucose <70 mg/dl Notify Anesthesia Provider Initiate Hypoglycemia Protocol See Chart 2
 Blood Glucose 70-300 mg/dl Notify Anesthesia Provider Initiate IV Regular insulin bolus protocol See Chart 1
 Blood Glucose >300 mg/dl Notify Anesthesia Provider

Chart 1- Regular Insulin IV Bolus Protocol				Chart 2- Hypoglycemia Protocol	
Baseline Glucose	<80 kg	81-99 kg	>100 kg	Blood Glucose mg/dl	Dextrose 50% solution -IV Bolus
BG (mg/dl)	Insulin Units	Insulin Units	Insulin Units	60-70	Give 6.3 g (12 ml or 1/4 amp)
181-200	1 unit	2	4	50-59	Give 12.5 g (25 ml or 1/2 amp)
201-250	2 units	4	6	<50	Give 25 g (50 ml or 1 amp)
251-300	3 units	6	8	Recheck BG every 15 minutes until >75 mg/dL0	
301-350	4 units	8	10	*For patients with insulin pump, notify anesthesia provider and discontinue immediately before leaving PreOp for OR.	
>351	5 units	10	12		

Recheck BG every 1-2 hours

UNIVERSITY of CALIFORNIA - IRVINE
HEALTHCARE
CONSENT FOR OPERATION/PROCEDURES OR
RENDERING OF OTHER
MEDICAL SERVICES

1. I hereby authorize and direct Naureen Bhoadazkar M.D. to perform the following operations & medical procedures upon the patient named above:

Bilateral, Image Guided, Endoscopic Sinus Surgery
(Name or description of operation(s) or procedure(s))

2. I hereby authorize and direct the above named surgeon to provide or arrange for the provisions of such additional service as he/she or they may deem necessary or advisable, including but not limited to the administration and maintenance of anesthesia and the performance of services involving pathology and radiology, and I hereby consent thereto.

3. The University of California, Irvine HealthCare is a research institution. I understand that any part of specimen(s) obtained during any examination, treatment, or procedure, including any laboratory or medical procedure, of the patient may be used in research which may or may not be related to the patient's treatment or condition. Specimens means and includes, without limitation, any organ, tissue, bone or other bodily fluids of any kind. I further understand that the patient has no property or ownership interest in such specimen(s) or data and no right or entitlement in any research or research product using or derived from the specimen(s). I further authorize the pathologist to use his/her discretion in the disposition or use of any member, organ, or other tissue removed from my patient during the operation(s) or procedure(s) identified above.

4. My physician does not have any independent financial or research interest in the procedure/treatment, other than usual or customary, unless checked below.
 My physician has informed me he/she does have independent financial or research interest in this procedure/treatment.

5. I understand that there may be a healthcare industry manufacturer's representative present during the procedure/treatment and I consent to this, at the discretion and approval of my physician and hospital, unless checked below.
 I do not consent to the presence of any healthcare industry manufacturer's representative.

6. The University of California is a teaching institution, I understand that Fellows and Residents, acting under the supervision of the primary surgeon/procedurist, may be performing important procedural tasks related to this surgery or procedure in accordance with hospital policy and based upon their skill set. These tasks may include but are not limited to: opening/closing, harvesting grafts, dissecting tissue, removing tissue, transplanting tissue, implanting devices and placing monitoring or invasive lines.
 I also understand that qualified medical practitioners, who are not physicians (e.g. Physician's Assistant), may also be performing important procedural tasks that are within their scope of practice as determined by California state law and regulation and for which they have been granted privileges by the University of California, Irvine Healthcare.

All documentation must include the specific date and time of entry and a signature complete with identifying credential, title or classification.

Informed Consent for Endoscopic Sinus Surgery

As with any surgical procedure, endoscopic sinus surgery has risks. The chances of any major complication occurring are overall very small, but it is important that you understand the potential complications before proceeding and ask your surgeon about any concerns you may have.

- 1) **Bleeding:** All sinus surgery involves some degree of bleeding. Infrequently, significant bleeding may require stopping the procedure or placement of nasal packs. Blood transfusion is very rarely necessary and is given only if the patient's health would otherwise be compromised. Approximately 1-2% of patients on average experience bleeding resulting in admission to the hospital with possible return to the operating room.
- 2) **Recurrence of disease:** Surgery is not a cure for sinusitis. In most cases, you should expect to continue medications even after successful sinus surgery, although in general, the need for medications such as steroids (e.g. prednisone) or antibiotics is lessened. Scar tissue may form after surgery that requires treatment, typically in the office. In a very small number of cases, additional surgery may be necessary.
- 3) **Loss of smell:** Some patients who have decreased or absent of sense of smell due to sinusitis will have improvement in sense of smell after surgery, but there is no guarantee, and the loss may already be permanent. Rarely, with any nasal or sinus surgery, sense of smell may worsen temporarily or permanently. Taste is associated with smell and may also be affected.
- 4) **Visual / eye problems:** The sinuses are very close to the eye. Persistent tearing of the eye can result from surgery if the nasolacrimal duct is injured, but this is rare. If this problem occurs, it typically resolves on its own, otherwise an additional procedure may be necessary to treat it. Permanent visual loss or double vision after sinus surgery is fortunately extremely rare, occurring in less than 1 in 1000 cases. Bleeding may rarely and suddenly occur into the eye. If this occurs, it is typically during or shortly after the procedure, and may require an emergency procedure to be performed to prevent vision loss.
- 5) **Cerebrospinal fluid leak / brain injury:** The sinuses are also very close to the brain. There is a rare chance of injuring the brain lining and creating a leak of brain fluid (termed CSF leak). Should this occur, it may result in infection, termed meningitis. If a CSF leak is recognized during the surgery, we will immediately attempt to repair it, and you will be hospitalized following the procedure. Occasionally, a CSF leak will present following the surgical procedure as a steady crystal clear fluid leaking from the nose and require return to the operating room to repair. Chances of successful repair of the leak are greater than 90%. Injury to the brain itself or any major nerve or blood vessel next to the brain carries a poor chance of recovery, but such a complication is extremely rare and occurs in less than 1 in 1000 cases.

I have read and understood the above potential risks and complications of endoscopic sinus surgery and wish to proceed with the procedure. All of my questions regarding the procedure have been answered to my satisfaction.

Allergies:

- Reglan: Drug, Other reaction, extrapyramidal syndrome--restlessness

Discharge Medications:

- acetaminophen-HYDROcodone 325 mg-5 mg oral tablet: 1-2 tabs orally every 4 to 6 hours as needed for pain
- amLODIPine 5 mg oral tablet: 1 tab(s) orally once a day
- amoxicillin-clavulanate 875 mg-125 mg tablet: 1 tab(s) orally every 12 hours x 21 days . recommend daily probiotic or yogurt while on therapy
- prednISONE 10 mg tablet: 4 tab orally once a day x 4 days, 3 tab orally once a day x 4 days, 2 tab orally once a day x 4 days, 1 tab orally once a day x 4 days
- atenolol 50 mg oral tablet: 1 tab(s) orally once a day
- aspirin 81 mg oral tablet: 1 tab(s) orally once a day

Additional Medication Instructions:

For Your Safety:

If there are new medications prescribed for you, they should be taken in addition to the medication(s) you are currently on.
Please update your medication list with these changes.
Do not make any other changes to your medication list without first consulting your primary care physician.
Keep a complete list of the medications you take with you at all times.
Provide a copy to your primary care provider and at each care visit.

Activity:

remain active by walking or doing other light activity daily. limit to light, non-stressful activities and may shower daily.

Sedation:

You may feel sleepy/not yourself for several hours today. We suggest you remain with family or friends for rest of day. Do not drive, make important decisions, or drink alcohol for 24 hours.

Nutrition:

Resume normal diet.

Care of Wounds/Puncture Sites/Tubes:

Special instructions No nose blowing. Sneeze with your mouth open if needed.

Follow-Up:

An appointment has been made with Dr. Bhandarkar, at the, for 04-07-2015 09:00 AM, in the Irvine Office.

Procedures:

- **Procedures:** image guided endoscopic sinus surgery

Patient Education Assessment:

Refer to Nursing Assessment Form.

Preferred Language: English.

Is the patient ready to learn? yes.

What are the considerations/barriers to learning? none.

Learning preferences include verbal, written and hands-on.

 Beverly Wang, M.D., Pathologist

I have personally reviewed the specimen(s) and agree with the above interpretation.

PRE-OP FINDINGS / CLINICAL SUMMARY:

69 year old male with chronic sinusitis and history of inferior ___ reduction.

Procedure: Bilateral image guided endoscopic sinus surgery.

SPECIMEN(S) SUBMITTED:

BILATERAL SINUS CONTENTS

GROSS DESCRIPTION:

The specimen is received fresh labeled with the patient's identification and "bilateral sinus contents." It consists of a 3 x 2 x 0.3 cm aggregate of tan-pink tissue fragments wrapped and entirely submitted in cassette 1. GS:kp 03/30/2015 140310

OPERATIVE REPORT

DATE OF OPERATION: 03/30/2015

SURGEON(S): Naveen D Bhandarkar, MD(A)

PREOPERATIVE DIAGNOSES:

1. Chronic frontal sinusitis.
2. Chronic ethmoid sinusitis.
3. Chronic maxillary sinusitis.
4. Chronic sphenoid sinusitis.
5. Nasal and sinus polyposis
6. History of prior sinus surgery

POSTOPERATIVE DIAGNOSES:

1. Chronic frontal sinusitis.
2. Chronic ethmoid sinusitis.
3. Chronic maxillary sinusitis.
4. Chronic sphenoid sinusitis.
5. Nasal and sinus polyposis
6. History of prior sinus surgery

TEST PERFORMED:

1. Bilateral endoscopic frontal sinusotomy.
2. Bilateral endoscopic total ethmoidectomy.
3. Bilateral endoscopic maxillary sinusotomy with tissue removal.
4. Bilateral endoscopic sphenoidotomy with tissue removal.
5. Bilateral insertion, steroid eluting implant, left frontal ethmoidal, right middle meatal region.
6. Stereotactic computer-assisted extradural navigation.

ANESTHESIA: General endotracheal.

ESTIMATED BLOOD LOSS: 50 mL.

FINDINGS: Polypoid tissue and polyps significantly obstructing sinus cavities bilaterally, including frontal outflow with significant near complete obstruction. Evidence of prior surgery involving inferior turbinate resection and inferior meatal antrostomy.

DESCRIPTION OF PROCEDURE:

The patient was positioned supine on the operating room table and intubated under general anesthesia. The patient was prepped and draped in the usual fashion. A formal surgical pause was performed with all elements addressed.

The stereotactic navigational system was powered on with the confirmed high-resolution preoperative CT sinus scan uploaded and noted to be adequate for guidance. The patient tracker was applied to the forehead and a surface registration was performed per protocol with a tracer probe, with accuracy confirmed to within 1 mm by palpation of surface and intranasal landmarks. Image guidance was used throughout the case to navigate the setting of inflammation with previous dissection and tissue adjacent to the orbit and skull base.

Sinus surgery performed on the right side. The uncinate process was noted to be everted from previous polypoid tissue in the middle meatus. This was resected with micro-backbiting forceps and removed with the microdebrider. The natural ostium of the maxillary sinus was then

03/30/2015 - Admission (Discharged) in UCI OSS (continued)**Scans - All Encounter Scans (group 3 of 3) (continued)**

identified, noted to be separated from the posterior fontanelle opening with the intervening tissue resected with a wide antrostomy created. Polypoid tissue from the medial sinus wall was removed with an angled microdebrider blade. The ethmoid cavity was then dissected, resecting the ethmoid bulla identifying medial bulla and resecting anterior ethmoidal partitions completely opening the retro-bullar recess, suprabullar cells to the level of the frontal outflow. The basal lamella was entered at the appropriate level, resecting polypoid tissue and opening the posterior ethmoid cells which were dissected individually to made to improve patency. Image guidance was used to navigate dissection of each individual cell. The superior turbinate was noted to have polypoid degeneration, the lower portion was removed to open the sphenoid ethmoidal recess. The sphenoid ostium was identified with image guidance. The ostium was initially opened, and the sphenoid wall was then taken down at the level of the ostium and mushroom punch was used to create a wide sphenoidotomy with polypoid tissue removed from within the sinus to enhance patency. The frontal sinus outflow was then examined. Polypoid tissue was resected with an angled microdebrider blade from the outflow. The agger nasi was removed and partitions were taken superiorly with the bulla lamella and other partitions around the frontal sinus ostium resected to create a wide sinusotomy. Polypoid tissue from within the sinus was excised with angled microdebrider blade. The series of procedures were repeated on the left side.

Sinus surgery was performed on the left side. The uncinat process was noted to be everted from previous polypoid tissue in the middle meatus. This was resected with micro-backbiting forceps and removed with the microdebrider. The uncinat was noted attached to the orbit and the terminal recess was identified. The natural ostium of the maxillary sinus was then identified, noted to be separated from the posterior fontanelle opening with the intervening tissue resected with a wide antrostomy created. Polypoid tissue from the medial sinus wall was removed with an angled microdebrider blade. The ethmoid cavity was then dissected, resecting the ethmoid bulla identifying medial bulla and resecting anterior ethmoidal partitions completely opening the retro-bullar recess, suprabullar cells to the level of the frontal outflow. The basal lamella was entered at the appropriate level, resecting polypoid tissue and opening the posterior ethmoid cells which were dissected individually to made to improve patency. Image guidance was used to navigate dissection of each individual cell. The superior turbinate was noted to have polypoid degeneration, the lower portion was removed to open the sphenoid ethmoidal recess. The sphenoid ostium was identified with image guidance. The ostium was initially opened, and the sphenoid wall was then taken down at the level of the ostium and mushroom punch was used to create a wide sphenoidotomy with polypoid tissue removed from within the sinus to enhance patency. The frontal sinus outflow was then examined. Polypoid tissue was resected with an angled microdebrider blade from the outflow. There were alternate openings into the sinus proper which were connected by removing the intervening tissue which contained bone, possibly relating to a prior intersinus septal cell, followed by resection of polypoid tissue from within the frontal sinus with the angled microdebrider blade to create a wide sinusotomy. Maximal mucosal preservation was achieved.

At the conclusion of procedures, given the severe polypoid tissue and inflammation, it was determined that a topical steroid-eluting implant would be beneficial to improved disease control. This was performed bilaterally (or twice) as separate procedures. A mini size Propel implant containing 370 mcg of mometasone to elute in a controlled

03/30/2015 - Admission (Discharged) in UCI OSS (continued)

Scans - All Encounter Scans (group 3 of 3) (continued)

release fashion over 30 days was loaded into a guide catheter. The catheter was then advanced into the left nasal cavity and under endoscopic visualization, the implant advanced to rest within the dissected frontoethmoidal cavity. The prongs of the implant were manipulated with forceps into proper position for maximal apposition to mucosal surfaces. The right side was then addressed. A standard size Propel implant containing 370 mcg of mometasone to elute in a controlled release fashion over 30 days was loaded into a guide catheter. The catheter was then advanced into the left nasal cavity and under endoscopic visualization, the implant advanced to rest within the dissected middle meatal region and ethmoid cavity. The prongs of the implant were manipulated with forceps into proper position for maximal apposition to mucosal surfaces.

The oropharynx and stomach were thoroughly suctioned. The patient was awakened from anesthesia, extubated, and transported to the recovery room in stable condition.

Amb PreOp Consult Hospitalist Minor Surgery-OP Hospitalist P [Charted Location: Pavilion #1 HepIlet Pre-OP] [Date of Service: 03-18-2015 13:15, Authored: 03-18-2015 13:15] - for Visit: 2043060921. Final, Entered, Signed in Full, General

- Date of Evaluation 03-18-2015
- Hospitalist Attending DE ALBA, ISRAEL (Hospital Medicine)
- Referring Attending Physician Dr. Naveen Bhandarkar
- Surgical Condition chronic sinusitis with polyps
- Type of Surgery endoscopy sinus surgery
- Expected Date of Surgery 03-30-2015
- Anticipated Anesthesia monitored anesthesia care

History of Present Illness:

This is a 68 year old Male who is referred for hypertension.

- Unstable Cardiac Conditions: No major cardiac contraindications to elective surgery.
- Cardiac History:
No history of coronary artery disease, heart failure or arrhythmia. No chest pain, orthopnea or palpitations.

The patient is able to: mow lawn, carry >20 lbs, >9 holes golf for an estimated functional capacity of 6 METS

Other History:

hypertension
History also of prediabetes, GERD, right lung collapse post EGD

Outpatient Medications:

amoxicillin-clavulanate 875 mg-125 mg tablet: 1 tab(s) orally every 12 hours x 21 days
, recommend daily probiotic or yogurt while on therapy
prednisONE 10 mg tablet: 4 tab orally once a day x 4 days,
3 tab orally once a day x 4 days,
2 tab orally once a day x 4 days,
1 tab orally once a day x 4 days
atenolol 50 mg oral tablet: 1 tab(s) orally once a day
aspirin 81 mg oral tablet: 1 tab(s) orally once a day

Family History:

- Family History noncontributory for heart disease or bleeding disorder

Social History:

- Smoking Status: never smoker
- Frequency of Alcohol Intake: less than monthly
- Number of Standard Drinks on a Typical Day: 1 or 2

Review of Systems:

- Pulmonary history of lung collapse after EGD procedure
- Infectious none of the following: fever, sinus congestion, cough, sputum, dysuria, diarrhea, immunosuppressive therapy, weight loss, immunocompromised state
- Hemostasis aspirin or antiplatelet therapy
- ROS all other review of systems is negative

Physical Exam:

Requested by: RIVERA, KELLY (HIM), 04-02-2015 14:13	Page 1 of 3
---	-------------

03/30/2015 - Admission (Discharged) in UCI OSS (continued)

Scans - All Encounter Scans (group 3 of 3) (continued)

2043381115

MRN: 1778016 Visit: 2043381115 Age: 69y (03-29-1946)	HANNA, ADEL Gender: Male	UC Irvine Health Current Location: Pavilion III Hospital Pre-OP
--	-----------------------------	---

Vital Signs:

- BP Systolic (mm Hg) 160 mm Hg⁽¹⁾
- BP Diastolic (mm Hg) 93 mm Hg⁽¹⁾
- Heart Rate (beats/min) 62 beat(s) per minute⁽¹⁾
- Respiration (breaths/min) 18 ⁽¹⁾
- Temp (degrees C) 36.3 degrees C⁽¹⁾
- Temp (degrees F) 97.3 degrees F
- Weight (kg) 78.653 kg⁽¹⁾
- Height (cm) 172.7 cm⁽¹⁾
- Repeat BP (Systolic/Diastolic) 149/86

- General AOx4 NAD
- HEENT pupils equally round and reactive to light
- Neck normal carotid upstroke
- Lungs clear to auscultation bilaterally
- Heart regular rhythm, normal S1 S2
- Abdomen soft, non-tender, normal bowel sounds
- Extremity normal pulse
- Neurological motor and sensory exams are grossly intact
- Skin no lesions

Diagnostic Data:

- EKG: NSR at 61 BPM, no ST-T changes, no Q waves.

Impression:

The patient is scheduled for a low risk procedure and has no major cardiac contraindications to elective surgery without unstable cardiovascular signs or symptoms. Therefore, the patient has low cardiac risk.

Assessment:

- **Assessment:** 68 yo male with PMH of HTN, GERD, pre diabetes scheduled for endoscopic sinus surgery after refractory sinusitis to medical therapy.

1. Cardiac preoperative evaluation

Denies chest pain SOB, with excellent physical capacity. No RCRI criteria, no cardiac contraindications to elective surgery, patient at low risk for adverse cardiac events. No further risk stratification required.

2. Hypertension

Blood pressure elevated, patient compliant with medication regimen
The patient just started prednisone, that may be a contributing factor.

Plan:

- a) continue with atenolol at 50 mg daily
- b) start amlodipine 5 mg daily, prescription submitted to the pharmacy

medically optimized

Plan/Other Recommendations:

- **Educated:** patient, perioperative medication instructions
- **Preoperative Labs:** CBC; BMP; PT/INR; PTT; CXR

Requested by: RIVERA, KELLY (HIM), 04-02-2015 14:13 Page 2 of 3

Hematology

Therapy guidelines using the INR for patients stabilized on oral anticoagulant therapy:

- Moderate Intensity Regimen
2.0 - 3.0 INR
- High Intensity Regimen
2.5 - 3.5 INR

The physician must determine the best INR range depending on the reason for anticoagulant treatment and how each individual responds to treatment.

Requested By: DE ALBA, ISRAEL (MD (A))	Org Performed: RADNET

Chest PA + Lateral XR* Final

Examination: 71020 CR Chest 2 Views
Report

Procedure: CR Chest 2 Views

Exam Date: 3/18/2015 2:14 PM

Comparison Study: None available at time of dictation.

History: 68 years old Male with empyema atelectasis.

Findings/
Impression: There is elevation of right hemidiaphragm, mild blunting of right costophrenic angle and right inferior lateral pleural thickening. No pneumonia or edema or left effusion is identified. The cardiac silhouette appears mildly enlarged and the aorta is tortuous and ectatic. There is questioned osteopenia and degenerative changes in thoracic spine. Surgical clips and gaseous distention in upper abdomen on lateral view.
***** Final *****

03/18/2015 13:15 DE ALBA, ISRAEL (MD (A))

- **Date of Evaluation** 03-18-2015
- **Hospitalist Attending** DE ALBA, ISRAEL (Hospital Medicine)
- **Referring Attending Physician** Dr. Naveen Bhandarkar
- **Surgical Condition** chronic sinusitis with polyps
- **Type of Surgery** endoscopy sinus surgery
- **Expected Date of Surgery** 03-30-2015
- **Anticipated Anesthesia** monitored anesthesia care

History of Present Illness:

This is a 68 year old Male who is referred for hypertension.

- **Unstable Cardiac Conditions:** No major cardiac contraindications to elective surgery.
- **Cardiac History:**
No history of coronary artery disease, heart failure or arrhythmia. No chest pain, orthopnea or palpitations.

The patient is able to: mow lawn, carry >20 lbs, >9 holes golf for an estimated functional capacity of 6 METS

Other History:

hypertension
History also of prediabetes, GERD, right lung collapse post EGD

Outpatient Medications:

amoxicillin-clavulanate 875 mg-125 mg tablet: 1 tab(s) orally every 12 hours x 21 days , recommend daily probiotic or yogurt while on therapy
predniSONE 10 mg tablet: 4 tab orally once a day x 4 days,
3 tab orally once a day x4 days,
2 tab orally once a day x4 days,
1 tab orally once a day x4 days
atenolol 50 mg oral tablet: 1 tab(s) orally once a day
aspirin 81 mg oral tablet: 1 tab(s) orally once a day

Family History:

- **Family History** noncontributory for heart disease or bleeding disorder

Social History:

- **Smoking Status:** never smoker
- **Frequency of Alcohol Intake:** less than monthly
- **Number of Standard Drinks on a Typical Day:** 1 or 2

Review of Systems:

- **Pulmonary** history of lung collapse after EGD procedure
- **Infectious** none of the following: fever, sinus congestion, cough, sputum, dysuria, diarrhea, immunosuppressive therapy, weight loss, immunocompromised state
- **Hemostasis** aspirin or antiplatelet therapy

- ROS all other review of systems is negative

Physical Exam:

Vital Signs:

- BP Systolic (mm Hg) 160 mm Hg⁽¹⁾
- BP Diastolic (mm Hg) 93 mm Hg⁽¹⁾
- Heart Rate (beats/min) 62 beat(s) per minute⁽¹⁾
- Respiration (breaths/min) 18 ⁽¹⁾
- Temp (degrees C) 36.3 degrees C⁽¹⁾
- Temp (degrees F) 97.3 degrees F
- Weight (kg) 78.653 kg⁽¹⁾
- Height (cm) 172.7 cm⁽¹⁾
- Repeat BP (Systolic/Diastolic) 149/86

- General AOX4 NAD
- HEENT pupils equally round and reactive to light
- Neck normal carotid upstroke
- Lungs clear to auscultation bilaterally
- Heart regular rhythm, normal S1 S2
- Abdomen soft, non-tender, normal bowel sounds
- Extremity normal pulse
- Neurological motor and sensory exams are grossly intact
- Skin no lesions

Diagnostic Data:

- EKG: NSR at 61 BPM, no ST-T changes, no Q waves.

Impression:

The patient is scheduled for a low risk procedure and has no major cardiac contraindications to elective surgery without unstable cardiovascular signs or symptoms. Therefore, the patient has low cardiac risk.

Assessment:

- **Assessment:** 68 yo male with PMH of HTN, GERD, pre diabetes scheduled for endoscopic sinus surgery after refractory sinusitis to medical therapy.

1. Cardiac preoperative evaluation

Denies chest pain SOB, with excellent physical capacity. No RCRI criteria, no cardiac contraindications to elective surgery, patient at low risk for adverse cardiac events. No further risk stratification required.

2. Hypertension

Blood pressure elevated, patient compliant with medication regimen. The patient just started prednisone, that may be a contributing factor.

Appointments: (714) 456-7017, Fax: (714) 456-7248

CC: sinus problems

HPI: 68 year old male presenting for follow up of chronic sinusitis with polyposis with significant frontal headaches. The patient's symptoms and disease have failed to sufficiently improve with extensive medical therapy including oral steroids and antibiotics, nasal sprays. The patient is currently on a repeat course of oral steroids and antibiotics for exacerbation with recent worsening headaches. During this time he was also experiencing dysequilibrium and imbalance, and got into a car accident damaging a wheel from swerving. Previously, we had discussed the option for bilateral image guided endoscopic sinus surgery to address persistent disease.

Past Medical History:

Pre-diabetes
Right lung collapse from complicated hospital course post EGD
HTN
GERD
CRS

Past Surgical History:

Cholecystectomy 1986
Nissen fundoplication 1996

Family and social histories and a complete >10 system ROS were reviewed since the prior evaluation and other than noted above were unchanged.

Medications:

amoxicillin-clavulanate 875 mg-125 mg tablet 1 tab(s) orally every 12 hours x 21 days, recommend daily probiotic or yogurt while on therapy
aspirin 81 mg oral tablet 1 tab(s) orally once a day
atenolol 50 mg oral tablet 1 tab(s) orally once a day
predniSONE 10 mg tablet 4 tab orally once a day x 4 days,
3 tab orally once a day x 4 days,
2 tab orally once a day x 4 days,
1 tab orally once a day x 4 days

Allergies:

Reglan -> Other reaction

Vital Signs:

- **Last Vital Signs:** Data referenced from "Ambulatory Intake Note-OP Otolaryngology" 03/18/2015 10:01
BP: 143/84 | T: 97.2 F | HR: 75 | RR: 16
- **Body Measurements:** Data referenced from "Ambulatory Intake Note-OP Otolaryngology" 03/18/2015 10:01
Height: 5'8 | Weight: 174 lbs | Weight: 78.925 kgs | BSA: 1.95 | BMI: 26.5

Physical Exam:

• **Details:**

HEENT: NC/AT
CV: RRR
Lungs: CTA/B
Abd: Soft NT ND
Pulses: Normal
Extremities: No edema
Neuro: Grossly intact

Data Review:

• **Results**

Previous CT scans reviewed - not image guided protocol. Repeat ordered - will coordinate

• **Assessment and Plan:**

1. Chronic sinusitis with polyps, with persistent disease despite maximal medical therapy
 2. Frontal headaches, likely in part due to sinusitis, may have concurrent neurologic origin; consider vestibular migraine
- The risks, benefits, and alternatives of treatment options, including further medical therapy and/or surgery were discussed. The patient has elected to proceed with surgery based on failure of optimal medical therapy to result in sufficient improvement thus far. This will consist of bilateral image guided endoscopic sinus surgery with polypectomy.
 - Risks including but not limited to severe bleeding, partial or complete loss of olfaction, CSF leak, stroke, permanent vision loss, diplopia, orbital hematoma, and epiphora were understood. I discussed the possibility of no improvement or needing subsequent procedures. We have discussed the potential use of stents or intranasal splints to facilitate healing as well as various absorbable hemostatic materials or packing as necessary. The patient understands the importance of post-operative debridements, ongoing medical management (and that sinus surgery is not a cure for chronic sinusitis), and regular follow up. I discussed the use of oral corticosteroids and/or antibiotics around the time of surgery with possible associated side effects - patient currently on courses to continue through surgery date on 3/30. Stereotactic computer assisted navigation (image guidance) is indicated for this case based on the anatomic areas requiring dissection which have critical relationships to the orbit and/or skull base. Appropriate radiographic studies in this regard will be obtained and verified for compatibility. All questions were answered. No guarantee of success was stated or implied. Informed consent was obtained.

Amb Follow Up Note, ENT

03/18/2015 10:26

BHANDARKAR, NAVEEN D (MD (A))

- Repeat CT scan ordered with image guided protocol. Will attempt to obtain today.
- Hospitalist evaluation pending today for optimization prior to surgery - will follow recommendations
- Patient understands that headaches may be multifactorial in origin and that nasal airway / sinus optimization alone may not result in complete improvement. Consult with Neuro-Otology for evaluation of possible vestibular origin of symptoms.
