Medication Leaflets

nitroglycerin (oral/sublingual)

(NYE troe GLI ser in (OR al/sub LIN gwal))

GoNitro, Nitrolingual, Nitromist, Nitrostat, Nitro-Time

What is the most important information I should know about nitroglycerin?

Get emergency medical help if you still have chest pain after using a total of 3 doses in 15 minutes, or if you have chest pain that seems unusual.

What is nitroglycerin?

Nitroglycerin is used to treat or prevent attacks of chest pain (angina).

Nitroglycerin may also be used for purposes not listed in this medication guide.

What should I discuss with my healthcare provider before taking nitroglycerin?

You may not be able to use nitroglycerin if you have:

- severe anemia (low red blood cells);
- increased pressure inside the skull;
- circulation problems or shock (pale or clammy skin, cold sweat, numbness or tingling, fast or irregular heartbeats, or feeling like you might pass out); or
- if you also take riociguat or vericiguat.

Do not use erectile dysfunction medicine (such as Viagra, Cialis, or Levitra) or you could have a sudden and serious decrease in blood pressure.

Tell your doctor if you have ever had:

- an allergic reaction to nitroglycerin;
- a heart attack or other heart problems; or
- low blood pressure.

Tell your doctor if you are pregnant or breastfeeding.

Not approved for use by anyone younger than 18 years old.

How should I take nitroglycerin?

Follow all directions on your prescription label and read all medication guides or instruction sheets. Use the medicine exactly as directed. Try to rest or stay seated when you take nitroglycerin (may cause dizziness or fainting).

Read and carefully follow any Instructions for Use provided with your medicine. Ask your doctor or pharmacist if you do not understand these instructions.

Use this medicine at the first sign of chest pain. Use another dose every 5 minutes as needed, up to a total of 3 doses.

Get emergency medical help if you still have chest pain after using a total of 3 doses in 15 minutes, or if your chest pain seems unusual.

You may use nitroglycerin **sublingual** within 5 to 10 minutes before an activity that might cause chest pain.

Discharge Documentation

This medicine can affect the results of certain medical tests. Tell any doctor who treats you that you are using nitroglycerin.

If you take nitroglycerin on a regular schedule to prevent angina, do not stop taking it suddenly or you could have a severe attack of angina. **Keep this medicine on hand at all times. Get your prescription refilled before you run out of medicine completely.**

Store nitroglycerin at room temperature away from moisture and heat.

Keep the **spray** away from open flame or high heat, such as in a car on a hot day. The canister may explode if it gets too hot.

What happens if I miss a dose?

If you take nitroglycerin on a regular schedule, skip any missed dose if it's almost time for your next dose. **Do not** use two doses at one time.

What happens if I overdose?

Seek emergency medical attention or call the Poison Help line at 1-800-222-1222. **An overdose of nitroglycerin can be fatal.**

Overdose symptoms may include a throbbing headache, confusion, pounding heartbeats, vision problems, vomiting, bloody diarrhea, sweating, clammy skin, blue lips, weak or shallow breathing, loss of movement, seizure, or fainting.

What should I avoid while taking nitroglycerin?

Avoid getting up too fast from a sitting or lying position, or you may feel dizzy.

Drinking alcohol can increase certain side effects such as dizziness, drowsiness, feeling light-headed, or fainting.

What are the possible side effects of nitroglycerin?

Get emergency medical help if you have **signs of an allergic reaction**: hives, sweating, pale skin; nausea, vomiting; feeling weak or light-headed; difficult breathing; swelling of your face, lips, tongue, or throat.

Call your doctor at once if you have:

- severe or throbbing headaches that do not become less severe with continued use of nitroglycerin;
- pounding heartbeats or fluttering in your chest;
- slow heart rate;
- a light-headed feeling, like you might pass out;
- blurred vision or dry mouth; or
- **heart attack symptoms**--chest pain or pressure, pain spreading to your jaw or shoulder, nausea, sweating.

Nitroglycerin can cause severe headaches that should become less severe as you continue to use the medicine.

Common side effects may include:

- flushing (sudden warmth, redness, or tingly feeling);
- feeling light-headed, fainting;
- headache, dizziness; or
- numbness, tingling, burning pain.

This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

What other drugs will affect nitroglycerin?

Tell your doctor about all your current medicines, especially:

- aspirin, heparin;
- a diuretic (water pill);
- any medicine to treat erectile dysfunction;

- medicine to treat depression or psychiatric illness;
- medicine used to treat blood clots;
- heart or blood pressure medicine; or
- migraine headache medicine, such as **ergot medicine** (dihydroergotamine, ergotamine, ergonovine, methylergonovine).

This list is not complete and many other drugs may affect nitroglycerin. This includes prescription and over-the-counter medicines, vitamins, and herbal products. Not all possible drug interactions are listed here.

Where can I get more information?

Your pharmacist can provide more information about nitroglycerin.

Remember, keep this and all other medicines out of the reach of children, never share your medicines with others, and use this medication only for the indication prescribed.

Discharge Documentation

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

What can I expect after the procedure?

After the procedure, it is common to have:

- Bruising and tenderness at the catheter insertion area.

Follow these instructions at home:

Medicines

- Take over-the-counter and prescription medicines only as told by your health care provider.

Insertion site care

- Follow instructions from your health care provider about how to take care of your insertion site. Make sure you:
 - 46 Wash your hands with soap and water before you change your bandage (dressing). If soap and water are not available, use hand sanitizer.
 - 46 Change your dressing as told by your health care provider.
 - 46 Leave stitches (sutures), skin glue, or adhesive strips in place. These skin closures may need to stay in place for 2 weeks or longer. If adhesive strip edges start to loosen and curl up, you may trim the loose edges. **Do not** remove adhesive strips completely unless your health care provider tells you to do that.
- Check your insertion site every day for signs of infection. Check for:
 - 46 Redness, swelling, or pain.
 - 46 Fluid or blood.
 - 46 Pus or a bad smell.
 - 46 Warmth.
- **Do not** take baths, swim, or use a hot tub until your health care provider approves.
- You may shower 24–48 hours after the procedure, or as directed by your health care provider.
 - 46 Remove the dressing and gently wash the site with plain soap and water.
 - 46 Pat the area dry with a clean towel.
 - 46 **Do not** rub the site. That could cause bleeding.
- **Do not** apply powder or lotion to the site.

Activity

Attending: Khan M.D.,Mansurur R.

Discharge Documentation

- For 24 hours after the procedure, or as directed by your health care provider:
 - 46 **Do not** flex or bend the affected arm.
 - 46 **Do not** push or pull heavy objects with the affected arm.
 - 46 **Do not** drive yourself home from the hospital or clinic. You may drive 24 hours after the procedure unless your health care provider tells you not to.
 - 46 **Do not** operate machinery or power tools.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- Ask your health care provider when it is okay to:
 - 46 Return to work or school.
 - 46 Resume usual physical activities or sports.
 - 46 Resume sexual activity.

General instructions

- If the catheter site starts to bleed, raise your arm and put firm pressure on the site. If the bleeding does not stop, get help right away. **This is a medical emergency.**
- If you went home on the same day as your procedure, a responsible adult should be with you for the first 24 hours after you arrive home.
- Keep all follow-up visits as told by your health care provider. This is important.

Contact a health care provider if:

- You have a fever.
- You have redness, swelling, or yellow drainage around your insertion site.

Get help right away if:

- You have unusual pain at the radial site.
- The catheter insertion area swells very fast.
- The insertion area is bleeding, and the bleeding does not stop when you hold steady pressure on the area.
- Your arm or hand becomes pale, cool, tingly, or numb.

These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call your local emergency services (911 in the U.S.). Do not drive yourself to the hospital.

Summary

- After the procedure, it is common to have bruising and tenderness at the site.
- Follow instructions from your health care provider about how to take care of your radial site wound. Check the wound every day for signs of infection.
- Do not lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.

Coronary Angiogram With Stent, Care After

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

What can I expect after the procedure?

After the procedure, it is common to have:

- Bruising and tenderness at the insertion site. This usually fades within 1–2 weeks.
- A collection of blood under the skin (hematoma). This usually decreases within 1–2 weeks.

Follow these instructions at home:

Medicines

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed an antibiotic medicine, take it as told by your health care provider. **Do not** stop using the antibiotic even if you start to feel better.
- If you take medicines for diabetes, your health care provider may need to change how much you take. Ask your health care provider for specific directions about taking your diabetes medicines.
- If you are taking blood thinners:
 - 46 Talk with your health care provider before you take any medicines that contain aspirin or NSAIDs, such as ibuprofen. These medicines increase your risk for dangerous bleeding.
 - 46 Take your medicine exactly as told, at the same time every day.
 - 46 Avoid activities that could cause injury or bruising, and follow instructions about how to prevent falls.
 - 46 Wear a medical alert bracelet or carry a card that lists what medicines you take.

Eating and drinking

Discharge Documentation

- Follow instructions from your health care provider about eating or drinking restrictions.
- Eat a heart-healthy diet that includes plenty of fresh fruits and vegetables.
- Avoid foods that are high in salt, sugar, or saturated fat. Avoid fried foods or canned or highly processed food.
- Drink enough fluid to keep your urine pale yellow.

Alcohol use

- **Do not** drink alcohol if:
 - 46 Your health care provider tells you not to.
 - 46 You are pregnant, may be pregnant, or plan to become pregnant.
- If you drink alcohol:
 - 46 Limit how much you use to:
 - 52 0–1 drink a day for women.
 - 52 0–2 drinks a day for men.
 - 46 Be aware of how much alcohol is in your drink. In the U.S., one drink equals one 12 oz bottle of beer (355 mL), one 5 oz glass of wine (148 mL), or one 1½ oz glass of hard liquor (44 mL).

Bathing

- **Do not** take baths, swim, or use a hot tub until your health care provider approves. Ask your health care provider if you may take showers. You may only be allowed to take sponge baths.
- Gently wash the insertion site with plain soap and water.
- Pat the area dry with a clean towel. **Do not** rub. This may cause bleeding.

Incision care

- Follow instructions from your health care provider about how to take care of your insertion area. Make sure you:
 - 46 Wash your hands with soap and water before and after you change your bandage (dressing). If soap and water are not available, use hand sanitizer.
 - 46 Change your dressing as told by your health care provider.
 - 46 Leave stitches (sutures) or adhesive strips in place. These skin closures may need to stay in place for 2 weeks or longer. Discharge Documentation

—46 Avoid sitting for a long time without moving. Get up to take short walks every 1–2 hours. This is important to improve blood flow and breathing. Ask for help if you feel weak or unsteady.

- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.

Lifestyle

- **Do not** use any products that contain nicotine or tobacco, such as cigarettes, e-cigarettes, and chewing tobacco. If you need help quitting, ask your health care provider.
- If needed, work with your health care provider to treat other problems, such as being overweight, or having high blood pressure or diabetes.
- Get regular exercise. Do exercises as told by your health care provider.

General instructions

- Tell all your health care providers that you have a stent. This is especially important if you are going to get imaging studies, such as MRI.
- Wear compression stockings as told by your health care provider. These stockings help to prevent blood clots and reduce swelling in your legs.
- **Do not** strain during a bowel movement if the procedure was done through your leg. Straining may cause bleeding from the insertion site.
- Keep all follow-up visits as directed by your health care provider. This is important.

Contact a health care provider if you:

- Have a fever.
- Have chills.
- Have redness, swelling, or pain around your insertion area.
- Have fluid or blood (other than a little blood on the dressing) coming from your insertion area.
- Notice that your insertion area feels warm to the touch.
- Have pus or a bad smell coming from your insertion area.
- Have more bleeding from the insertion area. Hold pressure on the area.

Get help right away if:

- You develop chest pain or shortness of breath.

Discharge Documentation

- You feel like fainting or you faint.
- Your leg or arm becomes cool, numb, or tingly.
- You have unusual pain.
- Your insertion area is bleeding, and bleeding continues after 30 minutes of steadily held pressure.
- You develop bleeding anywhere else, including from your rectum. There may be bright red blood in your urine or stool, or you may have black, tarry stool.

These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call your local emergency services (911 in the U.S.). Do not drive yourself to the hospital.

Summary

- After this procedure, it is common to have bruising and tenderness around the catheter insertion site. This will go away in a few weeks.
- Follow your health care provider's instructions about caring for your insertion site. Change dressing and clean the area as instructed.
- Eat a heart-healthy diet. Limit alcohol use. **Do not** use tobacco or nicotine.
- Contact a health care provider if you have fever or chills, or if you have pus or a bad smell coming from the site.
- Get help right away if you develop chest pain, you faint, or have bleeding at the insertion site.

How to use this form

Show this **Return to Work** statement to your supervisor at work as soon as possible. Your employer should be aware of your condition and may be able to help with the necessary work activity restrictions.

Contact your health care provider if:

- You wish to return to work sooner than the date that is listed above.
- You have problems that make it difficult for you to return at that time.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Document Revised: 12/13/2018 Document Reviewed: 12/13/2018 Elsevier Patient Education © 2020 Elsevier Inc.

San Antonio Regional Hospital is a San Bernardino County Vaccination Center

San Bernardino County has extended COVID-19 vaccinations to all people 5 years and older.

San Antonio Regional Hospital has agreed to serve as a vaccination center for San Bernardino County.

An additional booster dose has been authorized (9/29/2021) for:

Individuals who have received the Pfizer mRNA COVID-19 vaccine at least 6 months after receiving their initial two doses and:

- People 65 and older or residents in long term care facility
- People aged 50-64 years with underlying medical conditions or at increased risk of social inequities
- People aged 18-64 years with underlying medical conditions or who are at increased risk for COVID-19 exposure and transmission because of occupational or institutional setting

Vaccination locations as of July 30, 2021

If you are 12 or older and a resident of San Bernardino County, all requests for a vaccination appointment at our hospital must be made by sending an email to covid19vaccine@sarh.org

Once you've sent the email to covid19vaccine@sarh.org, you will receive an email with a link to go online to schedule an appointment. The email will include the link and a specific invite code, which must be used when scheduling. There will be instructions regarding information which must be included to register as well as instructions on what to bring the day of your appointment and where to check-in. **You will need to make individual appointments for each person.**

You will need to bring:

- An I.D. showing proof of residency in San Bernardino County to be vaccinated.
- You must be a resident of San Bernardino County within the above tiers to qualify for vaccination at this location.
- Unfortunately, anyone who does not bring this identification will have to be rescheduled for another day – no exceptions.

If you do not receive the email with the link & invite code right away, it is due to a delay in vaccine shipment. Please be patient and continue to check your email for a return message from covid19vaccine@sarh.org until you receive the link and invite code.

Be sure to write down the date & time of your appointment as you will NOT receive a confirmation email.

Finally, your second vaccine will be scheduled when you get your first shot. You will need to keep the card they give you with this date and time. You will return to the same location for your second vaccine.

Additional vaccination locations and registration information for SAN BERNARDINO COUNTY can be found at <https://sbccovid19.com/vaccine>

Only for Patients Diagnosed with Coronavirus (COVID-19)

The novel Coronavirus, known as COVID-19. It is a viral illness that can cause fever, cough and trouble breathing. Some people may have chills, muscle aches, runny nose, sneezing, sore throat, upset stomach or loose stool.

When leaving the Hospital, you will be asked to wear a mask. You should wear it until you get home.

When do I need to call the doctor?

- Call your doctor if your breathing is getting worse e.g. harder or faster than before, or you feel like you are getting less air.
- Get medical attention right away if you have trouble breathing, chest pain or pressure that does not go away, new confusion or not able to wake up, or bluish lips or face.

Discharge Documentation

- If you can, put on a facemask before leaving home or before you enter the clinic or hospital.

Precautions at home

The virus is spread easily through tiny droplets when you cough or sneeze. You should take these steps to help prevent the disease from spreading to people in your home and community:

1. Self-isolate at home

Stay in your home, except to go to the doctor, and limit contact with others:

- Do not go to work, school, or public areas, except for getting medical care.
- Avoid using public transportation such as buses, ride-sharing, or taxis.
- If you have an upcoming doctor appointment, call the office and tell them that you have COVID-19.

Separate yourself from other people and animals in your home:

- Avoid touching other people, including handshaking.
- As much as you can, stay in a specific room and away from other people in your home. You should also use a separate bathroom, if available.
- Avoid sharing personal household items. You should not share dishes, drinking glasses, cups, eating utensils, towels, toothpaste, or bedding with other people in your home. After using these items, they should be washed well with soap and water.
- Do not handle pets or other animals while sick.

2. Clean and disinfect

Clean all "high-touch" surfaces every day:

- High-touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.
- Clean any surfaces that may have blood, stool, or body fluids on them. Use a household cleaning spray or wipe, according to the instructions on the label.
- Remove and wash clothes or bedding that have blood, stool, or body fluids on them.

3. Help stop the spread

Clean your hands often:

- Wash your hands with soap and water for at least 20 seconds **OR** use an alcohol-based hand sanitizer that contains at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- Wash your hands after blowing your nose, coughing, sneezing, going to the bathroom, and before eating or preparing food.
- Avoid touching your eyes, nose, and mouth with unwashed hands.

Cover your mouth and nose:

- Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can and clean your hands right away.
- Wear a facemask when you are around other people (e.g. sharing a room or vehicle) or pets, and before you enter a healthcare provider's office.
- Notify your close contacts

Your close contacts should:

- Self-monitor for symptoms by checking their temperature twice a day and watching for fever, cough, or shortness of breath. They should contact their doctor if they develop these symptoms.
- Clean their hands often and avoid touching eyes, nose, and mouth with unwashed hands.
- Wear a mask if they have to be in the same room as you, if you are not able to wear one.

When can I stop precautions at home?

Discharge Documentation

You can stop isolating yourself when the following things have happened:

You have had no fever for at least 24 hours (that is one full day of no fever without the use of medicine that reduces fevers)

AND

Other symptoms have improved (for example, when your cough or shortness of breath have improved)

AND

At least 10 days have passed since your symptoms first started.

Manage your stress and anxiety

Being ill can be stressful or cause anxiety:

- Remember that everyone reacts differently to stressful situations.
- COVID-19 might be especially stressful because it is a new disease and there is a lot of news coverage. Take breaks from watching, reading, or listening to news stories, including social media.
- People with preexisting mental conditions should continue their treatment and be aware of new or worsening symptoms.
- If you, or someone you care about, are feeling overwhelmed with emotions like sadness, depression, or anxiety, call the Substance Abuse and Mental Health Services Administration's (SAMHSA's) Disaster Distress Helpline: 1.800.985.5990 or text TalkWithUs to 66746. (TTY 1.800.846.8517)

Living Smoke Free

Smoking Facts

When a cigarette smoker inhales, about 25% of the nicotine in the smoke reaches the brain within six seconds. A "Pack-a-day" smoker gets between 50,000 and 70,000 such nicotine "jolts" a year. Nicotine causes the heart to beat much faster. Blood pressure rises and harmful substances pour into the blood. Combined with the stress caused by carbon monoxide in cigarette smoke, more than 120,000 heart attack deaths occur yearly among U.S. smokers.

Second Hand Smoke

Second hand smoke is the combination of smoke from a burning cigarette and smoke exhaled by a smoker. The smoke that burns off the end of a cigarette or cigar contains more harmful substances than the smoke inhaled by the smoker. If you do not smoke, but are exposed to second-hand smoke on a regular basis, your body is absorbing nicotine and other harmful substances just as the smokers body is doing. In the U.S., 37,000 annual deaths are related to second-hand smoke.

Do Not Smoke!!

If you would like more information on avoiding second-hand smoke or if you would like help to quit smoking, please contact the following community resource.

Narcotics - Safe Use, Storage and Disposal

Safe Use of Narcotics

Follow all directions on your prescription label. Never take this medicine in larger amounts, or for longer than prescribed. Misuse of narcotics can cause addiction, overdose, or death, especially in a child or other person using the medicine without a prescription.

Storage of Narcotics

Remember to keep your narcotics and all other medicines out of reach of children. Never share your medicines with others, and use this medication only for the indication prescribed on the prescription label.

Common Side Effects of Narcotics

Common side effects include dizziness, drowsiness, nausea, or constipation. This is not a complete list of side effects and other symptoms may occur. Call your doctor for medical advice about side effects. Seek medical attention right away if you have life threatening symptoms.

How To Dispose Of Unused Medications

Caregivers and consumers should remove expired or unused medicines from their home as quickly as possible to help reduce the chance that others may accidentally take or intentionally misuse the unneeded medicine.

*Call 1-800-882-9539 for locations that collect unused medications near you

Disposal of Medications At Home

If no take-back programs or DEA-authorized collectors are available near your area, and there are no specific disposal instructions on the label, you can follow these simple steps below to dispose of most medications in the household:

1. MIX - Mix medicines (do not crush tablets or capsules) with an unpalatable substance such as dirt, litter, or used coffee grounds
2. PLACE - Place the mixture in a container such as a sealed plastic bag
3. THROW - Throw the container in your household trash
4. SCRATCH OUT - Scratch out all personal information on the prescription label of your empty pill bottle or empty medicine packaging to make it unreadable, then dispose of the container.

**Persons may not dispose of illicit drugs (ex: marijuana, heroin, LSD) through these disposal methods.*

**Insulin syringes cannot be disposed of through one of the disposal methods stated above.*

Important Information To Know About Strokes

What is a Stroke?

A stroke occurs when a blood vessel that carries oxygen and nutrients to the brain is either blocked or bursts. When that happens, part of the brain cannot get the blood and oxygen it needs. Stroke is the No. 4 cause of death in the United States, behind diseases of the heart and cancer and is the leading cause of disability.

WARNING SIGNS OF STROKE

Stroke is a medical emergency. Know these warning signs and teach them to others. Every minute counts.

BE FAST and check for these signs:

BALANCE Dizziness, sudden trouble walking, or loss of balance?
EYES Trouble seeing or a sudden change in vision?
FACE Facial droop; uneven smile?

Discharge Documentation

ARM Arm numbness; arm weakness especially on one side?
SPEECH Slurred speech; difficulty speaking or understanding?
TIME Timing is critical. **Call 9-1-1.** Have ambulance go to the nearest stroke center immediately.

Risk Factors For Stroke

Factors that cannot be changed: age, heredity (family history) and race, gender, prior stroke, TIA or heart attack. Factors that can be changed, treated or controlled: High blood pressure, high cholesterol, diabetes mellitus, cigarette smoking, carotid or other artery disease, atrial fibrillation, other heart disease, poor diet, physical inactivity, obesity, sickle cell disease, illegal drug use.

Discharge From The Hospital

If you have had a stroke it is important that you take all medications as directed and receive continued medical care with your primary care physician or consulting physician following your discharge.

Important Information About Chest Pain & Acute Coronary Syndrome

What Is Acute Coronary Syndrome (ACS)? Acute Coronary Syndrome is an urgent problem in which the blood supply to the heart muscle is suddenly blocked. Well-known conditions that are acute coronary syndromes are heart attack and unstable angina. Over 800,000 people die in the US every year from a heart attack and on average 50% of these patients displayed, but ignored, the warning signs.

Signs and Symptoms of ACS

Most common presentations:

Chest pain or discomfort, which may involve pressure, tightness, aching, burning, or fullness. Pain or discomfort in one or both arms, the jaw, neck, back, or stomach, shortness of breath.

Less common presentations:

Feeling dizzy or lightheaded, nausea, sweating, unexplained excessive fatigue, unexplained feeling of anxiety.

Atypical symptoms include:

Epigastric pain, indigestion, stabbing pain with coughing and breathing, and increasing difficulty breathing.

Risk Factors

- Family history of chest pain, heart disease, or stroke.
- Smoking.
- High blood pressure.
- High blood cholesterol.
- Diabetes, history of gestational diabetes.
- Physical inactivity, being overweight or obese.
- For women: taking birth control pills, history of pre-eclampsia, or having a low birth weight baby.

SEEK IMMEDIATE MEDICAL CARE IF: You are experiencing any of the ACS symptoms, or you have severe chest pain, especially if the pain is crushing or pressure-like and spreads to arms, back, neck or jaw.

THIS IS AN EMERGENCY. Call 9-1-1 and DO NOT drive yourself to the hospital.

Congestive Heart Failure (CHF) Discharge Instructions

If you have Congestive Heart Failure (CHF) or have ever had CHF, these are guidelines that we recommend for better health

CALL YOUR DOCTOR RIGHT AWAY IF THE FOLLOWING OCCURS:

- More Shortness of Breath than usual, especially when active or when lying flat
- Weight gain of 2 - 3+ pounds overnight or 4 pounds or more in a week
- Dizziness or fainting episodes
- Extreme tiredness
- Swollen ankles or feet
- Lack of appetite, abdominal bloating or pain, nausea or vomiting
- Constant cough
- Chest pain
- Skipped beats or very slow heart rate (50 beats per minute or less)

Activity and Rest

Plan your day to include balanced periods of rest and activity. Put your feet up to reduce ankle swelling. Avoid extreme temperatures.

Medications

Know the purpose and side effects of your medications.

Report any side effects without delay to your doctor.

Your doctor will prescribe medications to improve the way your heart pumps and rids your body of extra water.

Take medication as directed. Never skip a dose or discontinue a medication without letting your doctor know.

Know your medication names, dosage and schedule. Get a refill before you run out.

If you have questions regarding dosages of your medications, contact your doctor.

Always keep an Up - To - Date List of the medications you are taking with you.

Diet

The blanks below with an asterisk (*) will only be completed by your nurse or physician if you actually have a diagnosis of CHF:

Your Doctor has prescribed * Diet.

Sodium * milligrams day.

Do not add extra salt to your diet. Follow a diet low in cholesterol and fat, particularly saturated fat.

Ask your doctor if limiting your fluids is necessary.

Your doctor has limited your fluids to * ounces / 24 hours.

Ask your doctor if limiting your fluids is necessary.

Rest 1 hour after meals before doing any activity.

Limit foods that have caffeine (e.g. coffee, tea, cola and chocolate) to 1-2 cups per day because of their stimulating effects.

Check with your Doctor about drinking alcohol. If OK, limit to 2 ounces per day.

Weigh Yourself Daily

Weigh yourself daily in the morning and record your weight. Report any sudden weight gain of 2-3 pounds overnight or 4 pounds or more in one week to your doctor.

Your weight when discharged was * pounds.

Discharge Documentation

Check with your Doctor before starting any exercise program. Exercise can increase muscle strength, flexibility and improve your ability to do other things. Avoid pushing, pulling, or raising heavy objects above the shoulder. Walking is one exercise that may be recommended. Start with a 3-5 minute warm-up of light, slow stretching. Walk at a comfortable pace, making sure you can easily carry on a conversation while exercising. Slowly increasing the distance is okay as strength improves. End you walking sessions with a cooling down period by gradually slowing down.

Medication Leaflets

nitroglycerin (oral/sublingual)

(NYE troe GLI ser in (OR al/sub LIN gwal))

GoNitro, Nitrolingual, Nitromist, Nitrostat, Nitro-Time

What is the most important information I should know about nitroglycerin?

Get emergency medical help if you still have chest pain after using a total of 3 doses in 15 minutes, or if you have chest pain that seems unusual.

What is nitroglycerin?

Nitroglycerin is used to treat or prevent attacks of chest pain (angina).

Nitroglycerin may also be used for purposes not listed in this medication guide.

What should I discuss with my healthcare provider before taking nitroglycerin?

You may not be able to use nitroglycerin if you have:

- severe anemia (low red blood cells);
- increased pressure inside the skull;
- circulation problems or shock (pale or clammy skin, cold sweat, numbness or tingling, fast or irregular heartbeats, or feeling like you might pass out); or
- if you also take riociguat or vericiguat.

Do not use erectile dysfunction medicine (such as Viagra, Cialis, or Levitra) or you could have a sudden and serious decrease in blood pressure.

Tell your doctor if you have ever had:

- an allergic reaction to nitroglycerin;
- a heart attack or other heart problems; or
- low blood pressure.

Tell your doctor if you are pregnant or breastfeeding.

Not approved for use by anyone younger than 18 years old.

How should I take nitroglycerin?

Follow all directions on your prescription label and read all medication guides or instruction sheets. Use the medicine exactly as directed. Try to rest or stay seated when you take nitroglycerin (may cause dizziness or fainting).

Read and carefully follow any Instructions for Use provided with your medicine. Ask your doctor or pharmacist if you do not understand these instructions.

Use this medicine at the first sign of chest pain. Use another dose every 5 minutes as needed, up to a total of 3 doses.

Get emergency medical help if you still have chest pain after using a total of 3 doses in 15 minutes, or if your chest pain seems unusual.

You may use nitroglycerin **sublingual** within 5 to 10 minutes before an activity that might cause chest pain.

Discharge Documentation

This medicine can affect the results of certain medical tests. Tell any doctor who treats you that you are using nitroglycerin.

If you take nitroglycerin on a regular schedule to prevent angina, do not stop taking it suddenly or you could have a severe attack of angina. **Keep this medicine on hand at all times. Get your prescription refilled before you run out of medicine completely.**

Store nitroglycerin at room temperature away from moisture and heat.

Keep the **spray** away from open flame or high heat, such as in a car on a hot day. The canister may explode if it gets too hot.

What happens if I miss a dose?

If you take nitroglycerin on a regular schedule, skip any missed dose if it's almost time for your next dose. **Do not** use two doses at one time.

What happens if I overdose?

Seek emergency medical attention or call the Poison Help line at 1-800-222-1222. **An overdose of nitroglycerin can be fatal.**

Overdose symptoms may include a throbbing headache, confusion, pounding heartbeats, vision problems, vomiting, bloody diarrhea, sweating, clammy skin, blue lips, weak or shallow breathing, loss of movement, seizure, or fainting.

What should I avoid while taking nitroglycerin?

Avoid getting up too fast from a sitting or lying position, or you may feel dizzy.

Drinking alcohol can increase certain side effects such as dizziness, drowsiness, feeling light-headed, or fainting.

What are the possible side effects of nitroglycerin?

Get emergency medical help if you have **signs of an allergic reaction**: hives, sweating, pale skin; nausea, vomiting; feeling weak or light-headed; difficult breathing; swelling of your face, lips, tongue, or throat.

Call your doctor at once if you have:

- severe or throbbing headaches that do not become less severe with continued use of nitroglycerin;
- pounding heartbeats or fluttering in your chest;
- slow heart rate;
- a light-headed feeling, like you might pass out;
- blurred vision or dry mouth; or
- **heart attack symptoms**--chest pain or pressure, pain spreading to your jaw or shoulder, nausea, sweating.

Nitroglycerin can cause severe headaches that should become less severe as you continue to use the medicine.

Common side effects may include:

- flushing (sudden warmth, redness, or tingly feeling);
- feeling light-headed, fainting;
- headache, dizziness; or
- numbness, tingling, burning pain.

This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

What other drugs will affect nitroglycerin?

Tell your doctor about all your current medicines, especially:

- aspirin, heparin;
- a diuretic (water pill);
- any medicine to treat erectile dysfunction;

- medicine to treat depression or psychiatric illness;
- medicine used to treat blood clots;
- heart or blood pressure medicine; or
- migraine headache medicine, such as **ergot medicine** (dihydroergotamine, ergotamine, ergonovine, methylergonovine).

This list is not complete and many other drugs may affect nitroglycerin. This includes prescription and over-the-counter medicines, vitamins, and herbal products. Not all possible drug interactions are listed here.

Where can I get more information?

Your pharmacist can provide more information about nitroglycerin.

Remember, keep this and all other medicines out of the reach of children, never share your medicines with others, and use this medication only for the indication prescribed.

Discharge Documentation

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

What can I expect after the procedure?

After the procedure, it is common to have:

- Bruising and tenderness at the catheter insertion area.

Follow these instructions at home:

Medicines

- Take over-the-counter and prescription medicines only as told by your health care provider.

Insertion site care

- Follow instructions from your health care provider about how to take care of your insertion site. Make sure you:
 - 46 Wash your hands with soap and water before you change your bandage (dressing). If soap and water are not available, use hand sanitizer.
 - 46 Change your dressing as told by your health care provider.
 - 46 Leave stitches (sutures), skin glue, or adhesive strips in place. These skin closures may need to stay in place for 2 weeks or longer. If adhesive strip edges start to loosen and curl up, you may trim the loose edges. **Do not** remove adhesive strips completely unless your health care provider tells you to do that.
- Check your insertion site every day for signs of infection. Check for:
 - 46 Redness, swelling, or pain.
 - 46 Fluid or blood.
 - 46 Pus or a bad smell.
 - 46 Warmth.
- **Do not** take baths, swim, or use a hot tub until your health care provider approves.
- You may shower 24–48 hours after the procedure, or as directed by your health care provider.
 - 46 Remove the dressing and gently wash the site with plain soap and water.
 - 46 Pat the area dry with a clean towel.
 - 46 **Do not** rub the site. That could cause bleeding.
- **Do not** apply powder or lotion to the site.

Activity

Discharge Documentation

- For 24 hours after the procedure, or as directed by your health care provider:
 - 46 **Do not** flex or bend the affected arm.
 - 46 **Do not** push or pull heavy objects with the affected arm.
 - 46 **Do not** drive yourself home from the hospital or clinic. You may drive 24 hours after the procedure unless your health care provider tells you not to.
 - 46 **Do not** operate machinery or power tools.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- Ask your health care provider when it is okay to:
 - 46 Return to work or school.
 - 46 Resume usual physical activities or sports.
 - 46 Resume sexual activity.

General instructions

- If the catheter site starts to bleed, raise your arm and put firm pressure on the site. If the bleeding does not stop, get help right away. **This is a medical emergency.**
- If you went home on the same day as your procedure, a responsible adult should be with you for the first 24 hours after you arrive home.
- Keep all follow-up visits as told by your health care provider. This is important.

Contact a health care provider if:

- You have a fever.
- You have redness, swelling, or yellow drainage around your insertion site.

Get help right away if:

- You have unusual pain at the radial site.
- The catheter insertion area swells very fast.
- The insertion area is bleeding, and the bleeding does not stop when you hold steady pressure on the area.
- Your arm or hand becomes pale, cool, tingly, or numb.

These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call your local emergency services (911 in the U.S.). Do not drive yourself to the hospital.

Summary

- After the procedure, it is common to have bruising and tenderness at the site.
- Follow instructions from your health care provider about how to take care of your radial site wound. Check the wound every day for signs of infection.
- Do not lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.

Coronary Angiogram With Stent, Care After

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

What can I expect after the procedure?

After the procedure, it is common to have:

- Bruising and tenderness at the insertion site. This usually fades within 1–2 weeks.
- A collection of blood under the skin (hematoma). This usually decreases within 1–2 weeks.

Follow these instructions at home:

Medicines

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed an antibiotic medicine, take it as told by your health care provider. **Do not** stop using the antibiotic even if you start to feel better.
- If you take medicines for diabetes, your health care provider may need to change how much you take. Ask your health care provider for specific directions about taking your diabetes medicines.
- If you are taking blood thinners:
 - 46 Talk with your health care provider before you take any medicines that contain aspirin or NSAIDs, such as ibuprofen. These medicines increase your risk for dangerous bleeding.
 - 46 Take your medicine exactly as told, at the same time every day.
 - 46 Avoid activities that could cause injury or bruising, and follow instructions about how to prevent falls.
 - 46 Wear a medical alert bracelet or carry a card that lists what medicines you take.

Eating and drinking

Discharge Documentation

- Follow instructions from your health care provider about eating or drinking restrictions.
- Eat a heart-healthy diet that includes plenty of fresh fruits and vegetables.
- Avoid foods that are high in salt, sugar, or saturated fat. Avoid fried foods or canned or highly processed food.
- Drink enough fluid to keep your urine pale yellow.

Alcohol use

- **Do not** drink alcohol if:
 - 46 Your health care provider tells you not to.
 - 46 You are pregnant, may be pregnant, or plan to become pregnant.
- If you drink alcohol:
 - 46 Limit how much you use to:
 - 52 0–1 drink a day for women.
 - 52 0–2 drinks a day for men.
 - 46 Be aware of how much alcohol is in your drink. In the U.S., one drink equals one 12 oz bottle of beer (355 mL), one 5 oz glass of wine (148 mL), or one 1½ oz glass of hard liquor (44 mL).

Bathing

- **Do not** take baths, swim, or use a hot tub until your health care provider approves. Ask your health care provider if you may take showers. You may only be allowed to take sponge baths.
- Gently wash the insertion site with plain soap and water.
- Pat the area dry with a clean towel. **Do not** rub. This may cause bleeding.

Incision care

- Follow instructions from your health care provider about how to take care of your insertion area. Make sure you:
 - 46 Wash your hands with soap and water before and after you change your bandage (dressing). If soap and water are not available, use hand sanitizer.
 - 46 Change your dressing as told by your health care provider.
 - 46 Leave stitches (sutures) or adhesive strips in place. These skin closures may need to stay in place for 2 weeks or longer. If adhesive strip edges start to loosen and curl up, you may trim the loose edges. **Do not** remove adhesive strips completely unless your health care provider tells you to do that.

Discharge Documentation

—46 Avoid sitting for a long time without moving. Get up to take short walks every 1–2 hours. This is important to improve blood flow and breathing. Ask for help if you feel weak or unsteady.

- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.

Lifestyle

- **Do not** use any products that contain nicotine or tobacco, such as cigarettes, e-cigarettes, and chewing tobacco. If you need help quitting, ask your health care provider.
- If needed, work with your health care provider to treat other problems, such as being overweight, or having high blood pressure or diabetes.
- Get regular exercise. Do exercises as told by your health care provider.

General instructions

- Tell all your health care providers that you have a stent. This is especially important if you are going to get imaging studies, such as MRI.
- Wear compression stockings as told by your health care provider. These stockings help to prevent blood clots and reduce swelling in your legs.
- **Do not** strain during a bowel movement if the procedure was done through your leg. Straining may cause bleeding from the insertion site.
- Keep all follow-up visits as directed by your health care provider. This is important.

Contact a health care provider if you:

- Have a fever.
- Have chills.
- Have redness, swelling, or pain around your insertion area.
- Have fluid or blood (other than a little blood on the dressing) coming from your insertion area.
- Notice that your insertion area feels warm to the touch.
- Have pus or a bad smell coming from your insertion area.
- Have more bleeding from the insertion area. Hold pressure on the area.

Get help right away if:

- You develop chest pain or shortness of breath.

Discharge Documentation

- You feel like fainting or you faint.
- Your leg or arm becomes cool, numb, or tingly.
- You have unusual pain.
- Your insertion area is bleeding, and bleeding continues after 30 minutes of steadily held pressure.
- You develop bleeding anywhere else, including from your rectum. There may be bright red blood in your urine or stool, or you may have black, tarry stool.

These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call your local emergency services (911 in the U.S.). Do not drive yourself to the hospital.

Summary

- After this procedure, it is common to have bruising and tenderness around the catheter insertion site. This will go away in a few weeks.
- Follow your health care provider's instructions about caring for your insertion site. Change dressing and clean the area as instructed.
- Eat a heart-healthy diet. Limit alcohol use. **Do not** use tobacco or nicotine.
- Contact a health care provider if you have fever or chills, or if you have pus or a bad smell coming from the site.
- Get help right away if you develop chest pain, you faint, or have bleeding at the insertion site.

If you are 12 or older and a resident of San Bernardino County, all requests for a vaccination appointment at our hospital must be made by sending an email to covid19vaccine@sarh.org

Once you've sent the email to covid19vaccine@sarh.org, you will receive an email with a link to go online to schedule an appointment. The email will include the link and a specific invite code, which must be used when scheduling. There will be instructions regarding information which must be included to register as well as instructions on what to bring the day of your appointment and where to check-in. **You will need to make individual appointments for each person.**

You will need to bring:

- An I.D. showing proof of residency in San Bernardino County to be vaccinated.
- You must be a resident of San Bernardino County within the above tiers to qualify for vaccination at this location.
- Unfortunately, anyone who does not bring this identification will have to be rescheduled for another day – no exceptions.

If you do not receive the email with the link & invite code right away, it is due to a delay in vaccine shipment. Please be patient and continue to check your email for a return message from covid19vaccine@sarh.org until you receive the link and invite code.

Be sure to write down the date & time of your appointment as you will NOT receive a confirmation email.

Finally, your second vaccine will be scheduled when you get your first shot. You will need to keep the card they give you with this date and time. You will return to the same location for your second vaccine.

Additional vaccination locations and registration information for SAN BERNARDINO COUNTY can be found at <https://sbccovid19.com/vaccine>

Only for Patients Diagnosed with Coronavirus (COVID-19)

The novel Coronavirus, known as COVID-19. It is a viral illness that can cause fever, cough and trouble breathing. Some people may have chills, muscle aches, runny nose, sneezing, sore throat, upset stomach or loose stool.

When leaving the Hospital, you will be asked to wear a mask. You should wear it until you get home.

When do I need to call the doctor?

- Call your doctor if your breathing is getting worse e.g. harder or faster than before, or you feel like you are getting less air.
- Get medical attention right away if you have trouble breathing, chest pain or pressure that does not go away, new confusion or not able to wake up, or bluish lips or face.

- If you can, put on a facemask before leaving home or before you enter the clinic or hospital.

Precautions at home

The virus is spread easily through tiny droplets when you cough or sneeze. You should take these steps to help prevent the disease from spreading to people in your home and community:

1. Self-isolate at home

Stay in your home, except to go to the doctor, and limit contact with others:

- Do not go to work, school, or public areas, except for getting medical care.
- Avoid using public transportation such as buses, ride-sharing, or taxis.
- If you have an upcoming doctor appointment, call the office and tell them that you have COVID-19.

Separate yourself from other people and animals in your home:

- Avoid touching other people, including handshaking.
- As much as you can, stay in a specific room and away from other people in your home. You should also use a separate bathroom, if available.
- Avoid sharing personal household items. You should not share dishes, drinking glasses, cups, eating utensils, towels, toothpaste, or bedding with other people in your home. After using these items, they should be washed well with soap and water.
- Do not handle pets or other animals while sick.

2. Clean and disinfect

Clean all "high-touch" surfaces every day:

- High-touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.
- Clean any surfaces that may have blood, stool, or body fluids on them. Use a household cleaning spray or wipe, according to the instructions on the label.
- Remove and wash clothes or bedding that have blood, stool, or body fluids on them.

3. Help stop the spread

Clean your hands often:

- Wash your hands with soap and water for at least 20 seconds **OR** use an alcohol-based hand sanitizer that contains at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- Wash your hands after blowing your nose, coughing, sneezing, going to the bathroom, and before eating or preparing food.
- Avoid touching your eyes, nose, and mouth with unwashed hands.

Cover your mouth and nose:

- Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can and clean your hands right away.
- Wear a facemask when you are around other people (e.g. sharing a room or vehicle) or pets, and before you enter a healthcare provider's office.
- Notify your close contacts

Your close contacts should:

- Self-monitor for symptoms by checking their temperature twice a day and watching for fever, cough, or shortness of breath. They should contact their doctor if they develop these symptoms.
- Clean their hands often and avoid touching eyes, nose, and mouth with unwashed hands.
- Wear a mask if they have to be in the same room as you, if you are not able to wear one.

When can I stop precautions at home?

Discharge Documentation

You can stop isolating yourself when the following things have happened:

You have had no fever for at least 24 hours (that is one full day of no fever without the use of medicine that reduces fevers)

AND

Other symptoms have improved (for example, when your cough or shortness of breath have improved)

AND

At least 10 days have passed since your symptoms first started.

Manage your stress and anxiety

Being ill can be stressful or cause anxiety:

- Remember that everyone reacts differently to stressful situations.
- COVID-19 might be especially stressful because it is a new disease and there is a lot of news coverage. Take breaks from watching, reading, or listening to news stories, including social media.
- People with preexisting mental conditions should continue their treatment and be aware of new or worsening symptoms.
- If you, or someone you care about, are feeling overwhelmed with emotions like sadness, depression, or anxiety, call the Substance Abuse and Mental Health Services Administration's (SAMHSA's) Disaster Distress Helpline: 1.800.985.5990 or text TalkWithUs to 66746. (TTY 1.800.846.8517)

Living Smoke Free

Smoking Facts

When a cigarette smoker inhales, about 25% of the nicotine in the smoke reaches the brain within six seconds. A "Pack-a-day" smoker gets between 50,000 and 70,000 such nicotine "jolts" a year. Nicotine causes the heart to beat much faster. Blood pressure rises and harmful substances pour into the blood. Combined with the stress caused by carbon monoxide in cigarette smoke, more than 120,000 heart attack deaths occur yearly among U.S. smokers.

Second Hand Smoke

Second hand smoke is the combination of smoke from a burning cigarette and smoke exhaled by a smoker. The smoke that burns off the end of a cigarette or cigar contains more harmful substances than the smoke inhaled by the smoker. If you do not smoke, but are exposed to second-hand smoke on a regular basis, your body is absorbing nicotine and other harmful substances just as the smokers body is doing. In the U.S., 37,000 annual deaths are related to second-hand smoke.

Do Not Smoke!!

If you would like more information on avoiding second-hand smoke or if you would like help to quit smoking, please contact the following community resource.

Narcotics - Safe Use, Storage and Disposal

Safe Use of Narcotics

Follow all directions on your prescription label. Never take this medicine in larger amounts, or for longer than prescribed. Misuse of narcotics can cause addiction, overdose, or death, especially in a child or other person using the medicine without a prescription.

Storage of Narcotics

Remember to keep your narcotics and all other medicines out of reach of children. Never share your medicines with others, and use this medication only for the indication prescribed on the prescription label.

Common Side Effects of Narcotics

Common side effects include dizziness, drowsiness, nausea, or constipation. This is not a complete list of side effects and other symptoms may occur. Call your doctor for medical advice about side effects. Seek medical attention right away if you have life threatening symptoms.

How To Dispose Of Unused Medications

Caregivers and consumers should remove expired or unused medicines from their home as quickly as possible to help reduce the chance that others may accidentally take or intentionally misuse the unneeded medicine.

*Call 1-800-882-9539 for locations that collect unused medications near you

Disposal of Medications At Home

If no take-back programs or DEA-authorized collectors are available near your area, and there are no specific disposal instructions on the label, you can follow these simple steps below to dispose of most medications in the household:

1. MIX - Mix medicines (do not crush tablets or capsules) with an unpalatable substance such as dirt, litter, or used coffee grounds
2. PLACE - Place the mixture in a container such as a sealed plastic bag
3. THROW - Throw the container in your household trash
4. SCRATCH OUT - Scratch out all personal information on the prescription label of your empty pill bottle or empty medicine packaging to make it unreadable, then dispose of the container.

**Persons may not dispose of illicit drugs (ex: marijuana, heroin, LSD) through these disposal methods.*

**Insulin syringes cannot be disposed of through one of the disposal methods stated above.*

Important Information To Know About Strokes

What is a Stroke?

A stroke occurs when a blood vessel that carries oxygen and nutrients to the brain is either blocked or bursts. When that happens, part of the brain cannot get the blood and oxygen it needs. Stroke is the No. 4 cause of death in the United States, behind diseases of the heart and cancer and is the leading cause of disability.

WARNING SIGNS OF STROKE

Stroke is a medical emergency. Know these warning signs and teach them to others. Every minute counts.

BE FAST and check for these signs:

BALANCE Dizziness, sudden trouble walking, or loss of balance?
EYES Trouble seeing or a sudden change in vision?
FACE Facial droop; uneven smile?

Discharge Documentation

ARM Arm numbness; arm weakness especially on one side?
SPEECH Slurred speech; difficulty speaking or understanding?
TIME Timing is critical. **Call 9-1-1.** Have ambulance go to the nearest stroke center immediately.

Risk Factors For Stroke

Factors that cannot be changed: age, heredity (family history) and race, gender, prior stroke, TIA or heart attack. Factors that can be changed, treated or controlled: High blood pressure, high cholesterol, diabetes mellitus, cigarette smoking, carotid or other artery disease, atrial fibrillation, other heart disease, poor diet, physical inactivity, obesity, sickle cell disease, illegal drug use.

Discharge From The Hospital

If you have had a stroke it is important that you take all medications as directed and receive continued medical care with your primary care physician or consulting physician following your discharge.

Important Information About Chest Pain & Acute Coronary Syndrome

What Is Acute Coronary Syndrome (ACS)? Acute Coronary Syndrome is an urgent problem in which the blood supply to the heart muscle is suddenly blocked. Well-known conditions that are acute coronary syndromes are heart attack and unstable angina. Over 800,000 people die in the US every year from a heart attack and on average 50% of these patients displayed, but ignored, the warning signs.

Signs and Symptoms of ACS

Most common presentations:

Chest pain or discomfort, which may involve pressure, tightness, aching, burning, or fullness. Pain or discomfort in one or both arms, the jaw, neck, back, or stomach, shortness of breath.

Less common presentations:

Feeling dizzy or lightheaded, nausea, sweating, unexplained excessive fatigue, unexplained feeling of anxiety.

Atypical symptoms include:

Epigastric pain, indigestion, stabbing pain with coughing and breathing, and increasing difficulty breathing.

Risk Factors

- Family history of chest pain, heart disease, or stroke.
- Smoking.
- High blood pressure.
- High blood cholesterol.
- Diabetes, history of gestational diabetes.
- Physical inactivity, being overweight or obese.
- For women: taking birth control pills, history of pre-eclampsia, or having a low birth weight baby.

SEEK IMMEDIATE MEDICAL CARE IF: You are experiencing any of the ACS symptoms, or you have severe chest pain, especially if the pain is crushing or pressure-like and spreads to arms, back, neck or jaw.

THIS IS AN EMERGENCY. Call 9-1-1 and DO NOT drive yourself to the hospital.

Discharge Documentation

Congestive Heart Failure (CHF) Discharge Instructions

If you have Congestive Heart Failure (CHF) or have ever had CHF, these are guidelines that we recommend for better health

CALL YOUR DOCTOR RIGHT AWAY IF THE FOLLOWING OCCURS:

- More Shortness of Breath than usual, especially when active or when lying flat
- Weight gain of 2 - 3+ pounds overnight or 4 pounds or more in a week
- Dizziness or fainting episodes
- Extreme tiredness
- Swollen ankles or feet
- Lack of appetite, abdominal bloating or pain, nausea or vomiting
- Constant cough
- Chest pain
- Skipped beats or very slow heart rate (50 beats per minute or less)

Activity and Rest

Plan your day to include balanced periods of rest and activity. Put your feet up to reduce ankle swelling. Avoid extreme temperatures.

Medications

Know the purpose and side effects of your medications.

Report any side effects without delay to your doctor.

Your doctor will prescribe medications to improve the way your heart pumps and rids your body of extra water.

Take medication as directed. Never skip a dose or discontinue a medication without letting your doctor know.

Know your medication names, dosage and schedule. Get a refill before you run out.

If you have questions regarding dosages of your medications, contact your doctor.

Always keep an Up - To - Date List of the medications you are taking with you.

Diet

The blanks below with an asterisk (*) will only be completed by your nurse or physician if you actually have a diagnosis of CHF:

Your Doctor has prescribed * Diet.

Sodium * milligrams day.

Do not add extra salt to your diet. Follow a diet low in cholesterol and fat, particularly saturated fat.

Ask your doctor if limiting your fluids is necessary.

Your doctor has limited your fluids to * ounces / 24 hours.

Ask your doctor if limiting your fluids is necessary.

Rest 1 hour after meals before doing any activity.

Limit foods that have caffeine (e.g. coffee, tea, cola and chocolate) to 1-2 cups per day because of their stimulating effects.

Check with your Doctor about drinking alcohol. If OK, limit to 2 ounces per day.

Weigh Yourself Daily

Weigh yourself daily in the morning and record your weight. Report any sudden weight gain of 2-3 pounds overnight or 4 pounds or more in one week to your doctor.

Your weight when discharged was * pounds.

Discharge Documentation

Check with your Doctor before starting any exercise program. Exercise can increase muscle strength, flexibility and improve your ability to do other things. Avoid pushing, pulling, or raising heavy objects above the shoulder. Walking is one exercise that may be recommended. Start with a 3-5 minute warm-up of light, slow stretching. Walk at a comfortable pace, making sure you can easily carry on a conversation while exercising. Slowly increasing the distance is okay as strength improves. End you walking sessions with a cooling down period by gradually slowing down.

Your costs for medications:

Generally, prescription and over-the-counter drugs, including "self-administered drugs," you get in a hospital outpatient setting (like an emergency department) aren't covered by Part B. "Self-administered drugs" are drugs you'd normally take on your own. For safety reasons, many hospitals don't allow you to take medications brought from home. If you have a Medicare prescription drug plan (Part D), your plan may help you pay for these drugs. You'll likely need to pay out-of-pocket for these drugs and submit a claim to your drug plan for a refund. Contact your drug plan for more information.

If you're enrolled in a Medicare Advantage plan (like an HMO or PPO) or other Medicare health plan (Part C), your costs and coverage may be different. Check with your plan to find out about coverage for outpatient observation services.

If you're a Qualified Medicare Beneficiary through your state Medicaid program, you can't be billed for Part A or Part B deductibles, coinsurance, and copayments.

Additional Information:

***If you are covered by a Health Plan other than Medicare, this notice is to inform you that your care is being provided on an outpatient basis, which may affect your health care coverage reimbursement.

If you have questions regarding your admission status please call the Case Management Department at: (909) 920-4820 or ext. 24820 and a Case Manager will answer your questions.

SAN ANTONIO REGIONAL HOSPITAL

Medicare Outpatient Observation Notice

Patient name:

Patient number:

You're a hospital outpatient receiving observation services. You are not an inpatient because:

Observation services:

- Are given to help your doctor decide if you need to be admitted as an inpatient or discharged;
- Are given in the emergency department or another area of the hospital; and
- Usually last 48 hours or less

Being an outpatient may affect what you pay in a hospital:

- When you're a hospital outpatient, your observation stay is covered under Medicare Part B.
- For Part B services, you generally pay:
 - A copayment for each outpatient hospital service you get. Part B copayments may vary by type of service.
 - 20% of the Medicare-approved amount for most doctor services, after the Part B deductible.

Observation services may affect coverage and payment of your care after you leave the hospital:

- If you need skilled nursing facility (SNF) care after you leave the hospital, Medicare Part A will only cover SNF care if you've had a 3-day minimum, medically necessary, inpatient hospital stay for a related illness or injury. An inpatient hospital stay begins the day the hospital admits you as an inpatient based on a doctor's order and doesn't include the day you're discharged.
- If you have Medicaid, a Medicare Advantage plan or other health plan, Medicaid or the plan may have different rules for SNF coverage after you leave the hospital. Check with Medicaid or your plan.

NOTE: Medicare Part A generally doesn't cover outpatient hospital services, like an observation stay. However, Part A will generally cover medically necessary inpatient services if the hospital admits you as an inpatient based on a doctor's order. In most cases, you'll pay a one-time deductible for all of your inpatient hospital services for the first 60 days you're in a hospital.

If you have any questions about your observation services, ask the hospital staff member giving you this notice or the doctor providing your hospital care. You can also ask to speak with someone from the hospital's utilization or discharge planning department.

You can also call 1-800-MEDICARE (1-800-633-4227). TTY users should call 1-877-486-2048.
