## Document Text

CLINICAL HISTORY: Reason: left foot; Out of orthosis/splint/cast

COMPARISON: 5/27/2014

## Findings/ impression:

Subacute healing fracture of the proximal fifth metatarsal. The alignment is normal. The bones are osteopenic, which may be related to disuse. No new fractures are seen. There is no significant soft tissue abnormality.

## Document Text

CLINICAL HISTORY: Reason: Possible left 5th metatarsal fracture

COMPARISON: No previous study available.

## FINDINGS/ IMPRESSION:

There is a comminuted fracture of the proximal to midportion of the

fifth metatarsal. A transverse fracture line is seen at the base of the fifth metatarsal, but multiple other fracture lines are seen extending longitudinally to the midportion of the mid fifth metatarsal shaft. These additional fracture lines are best seen on the AP view. Overall, no significant displacement or angulation of the fracture fragments noted.  
No other focal osseous abnormality noted.
