See Attachment A; Claim No.05814232 - This Subpoena Duces Tecum shall serve as a Deposition Subpoena for the NON-appearance production of records

For Failure to attend and to produce said documents you may be deemed guilty of contempt and liable to pay the parties aggrieved all losses and damages sustained thereby and forfeit one hundred dollars in addition thereto

This subpoena is issued at the request of the person making the declaration on the reverse hereof, or on the copy which is served herewith

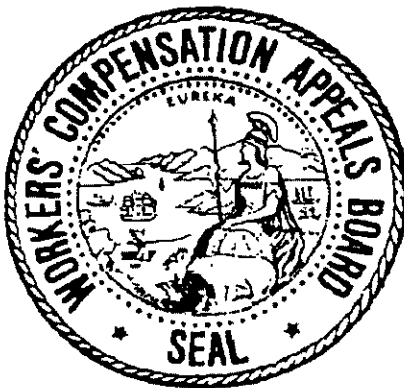

Date Issued: Feb. 25, 2013

WORKERS' COMPENSATION APPEALS BOARD
OF THE STATE OF CALIFORNIA

Date Due: Mar, 19 2013

By 

Secretary Assistant Secretary Workers Compensation Judge

***For injuries occurring on or after January 1, 1990 and before January 1, 1994:**

If no application for Adjudication of Claim has been filed, a declaration under penalty of perjury that Employee's Claim for Workers' Compensation Benefits (Form DWC-1) has been filed pursuant to Labor Code Section 5401 must be executed properly

**See reverse side (Page 2 of 2)
Subpoena invalid without declaration**

You may fully comply with this subpoena by mailing the records described (or authenticated copies, Evid. Code 1561) to the person and place stated above within (10) days of the date of service of this subpoena.

This subpoena does not apply to any member of the Highway Patrol, Sheriff's Office or City Police Department unless accompanied by notice from the Board that deposit of the witness fee has been made in accordance with Government Code 68097.2, et seq

DIA WCAB FORM 32 (Side 1) (REV. 06/94)

DECLARATION FOR SUBPOENA DUCES TECUM

STATE OF CALIFORNIA, County of Los Angeles

The undersigned states:

That he/she is (one of) the attorney(s) of record or representative(s) for the Applicant/Defendant in the action captioned on the reverse hereof.

That the subpoenaed custodian of record has in his/her possession or under his/her control the documents described on the reverse side hereof. That the said documents are material to the issues involved in the case and may contain information that is not available from any other known source.

Affidavit for Injuries on or After January 1, 1990 and Before January 1, 1994

That an Employee's Claim for Workers' Compensation Benefits (DWC Form 1) has been filed in accordance with Labor Code Section 5401 by the alleged injured workers whose records are sought, or if the worker is deceased, by the dependent(s) of the decedent, and that a true copy of the form filed is attached hereto. (Check box if applicable and part of declaration below. See instructions on page one of the subpoena.)

I declare under the penalty of perjury that the foregoing is true and correct.

Executed on Feb. 25, 2013, at La Habra, California

Message

Telephone call to patient : The patient's cell telephone number is 760-258-7545. During work hours this is a good number to call.

The patient was at work. He stated that his blood sugar last night was 141. He did not take his Metformin 500 mg. Fasting blood sugar was 241 this morning. He stated that he took metformin 500 mg. He was advised to check his sugar before lunch and before dinner. He seemed to understand that his blood sugar was below 90. He should not take his metformin and should be taking an intake of food. Scheduled to take metformin 500 mg twice a day. He apparently understands how to check his blood sugars. He is scheduled for an appointment with Dr. White in 5 days. Patient was advised to call Dr. White -- Team 1 or Christy should he have any questions.

Comment:
MARTINHO,PERLA - 15 Feb 2012 10:17 AM
TASK CREATED
Caller: Self; (760)258-7545 (Home)

Pt called and states he was seen by Dr. Lath yesterday and was sent to the UCC. Pt states he went to UCC but left because there was a long wait. Pt is calling and jnow asking if Dr. White can please prescribe some medication to lower his blood sugar. Pt was told that Dr. White will call him in the next 15min per Dr. Ramos
Best contact number is 760-258-7545.

Subjective

Telephone call from patient today concerning failure to followup with appointment. Patient reports to urgent care yesterday but did not stay to do the long week. However patient calls today requesting medication to help control sugar. I spoke to Dr. white concerning this patient and we both agree that patient with elevated blood sugar and evidence of ketonuria would benefit from close monitoring and assessment UCC. Patient instructed to proceed to UCC by PCP.

Plan

#1-PCP calls patient back in advised of need to followup hyperglycemic state along with abnormal lab findings at UCC for IV hydration. Patient agrees and complies with treatment plan.

#2-telephone call to see seen by lead physicians advised of patient arrival at UCC Pasadena.case discussed with Dr. LU. Dr. Luu takes information concerning patient name and will watch out for patients arrival to Pasadena UCC.

HPI

Patient was seen in this office on an as an urgent visit because his blood sugar level was 450.
 He has chronic gout and is on allopurinol 300 mg p.o. q.d. with good control.
 2 weeks ago, he developed pain in his knee and left foot.
 His PCP advised him to take 5 mg prednisone b.i.d. for one week.
 Patient has diabetes mellitus controlled with diet alone.
 His last glycohemoglobin was 6.1.
 His blood sugar has been gradually increasing.
 5 days ago it was 230, went up to 300 for 2 days and over 400 next 2 days.
 His friend alerted him that he may develop a diabetic coma and that he should see the physician ASAP.
 He denies headache, drowsiness increased thirst.
 He states his eyes are blurry today.
 Denies dizziness, chest pain, abdominal pain, GU or GI problem.

Message

Telephone call. I left message for patient to call me. I left message at his home telephone number. I advised, that the white blood count cell count was elevated. A small amount of other tests looked generally good. He was to blood sugar in the urine, but the hemoglobin A1c, was 6.1. I advised patient to call us and do additional testing regarding his fatigue.

Chief Complaint

• New patient to this clinic

HPI

The patient states that he has a history of Diabetes Mellitus, which he feels is controlled with diet. Losing weight and had problems when he was taking medication with low blood sugars. Has recently had an episode of acute gout. Takes Allopurinol 300 mg one daily.

Current Meds

Allopurinol 300 MG Tablet;TAKE 1 TABLET DAILY.; Rx.

Allergies

No allergies known.

Personal Hx

Single has a significant otherfemale
2 brothers one sister. No information.
Father had carcinoma of the colon in his mid 50s. Diabetic CVA.
Mother CVA,

Immunizations

Patient states =over 10 years since tetanus toxoid
Patient has not had hepatitis A or B. immunization patient works as a plumber.

ROS

HEENT patient states he had blurry vision. He felt that this was probably related to his diabetes. Sugars were high.
No recent eye exams.
CRV no complaints.
GI no complaints.
GU occasional frequency during the day over the patient states that he drinks as much water as possible.
CNS denies muscular- history of gout, left ankle.

Vital Signs

Recorded by Casasola,Cindy on 11 Jan 2011 10:44 AM

Height: 69 in, Weight: 180 lb, BMI: 26.6 kg/m2,
O2 Sat: 100 (%SpO2).

Physical Exam

Well-developed well-nourished, male, appearing stated age, in no pain at the time of the examination.
Head normocephalic.
HEENT normal appearance.
Neck thyroid midline not enlarged. No cervical lymphadenopathy.
Chest is symmetrical.
Heart regular sinus rhythm, normal intensity quality and duration.
Lungs normal breath sounds.
Abdomen no masses or tenderness.
Genitalia patient has a 1 cm wart on the shaft of the penis. Testicles, normal. No hernia, left or right groin.

Patient: DANIEL DORAN
Encounter: Jan 11 2011 10:00AM

MRN: 16-1087611

Rectal examination prostate small. Patient has a tight sphincter with evidence of hemorrhoids.
Neurologic no focal signs 2+ deep tendon age. Her reflexes.
Feet no edema. No numbness.

Assessment

- Normal examination (V70.0)
- Diabetes mellitus which is well-controlled (250.00); Check current Hgb A1c
- Gout which is improving (274.00); Control Risk factors
- Genital warts which is failing to change as expected (078.11); Wart on skin of penis. Plan schedule removal

Plan

Laboratory CBC, UA, chemistry panel, hemoglobin A1c, urinalysis.

DT booster.

Flu immunization

Recommended IN future= hepatitis A and B series.

Schedule removal wart on the penis 3 weeks Dr. White.

Schedule EKG IN 3 weeks.

Referred to Valley GI for colonoscopy due to family history of colon cancer in-fifties.

Dear Dr. White,

I had the pleasure of seeing your patient Daniel Doran on March 08, 2012

Patient states the reason for their visit was:

- Decreased visual acuity

Findings:

- Best Corrected Vision: Rt: 20/20-2 Lt: 20/20-2
- IOP's Rt: 18 mm of Hg Lt: 18 mm of Hg

Impressions:

- Diabetes with no ophthalmic manifestations (250.00)

Current Ophthalmic Medications:

- None

Comments and Recommendations:

Patient to return in 2 Months.

If I can provide further information, I will be happy to do so.

Sincerely,

Minh Le O.D.

PROGRESS NOTE

29 February 2012

Dear Drs. White and Mourani,

I saw **Daniel Doran (dob: 6/4/66)** today after seeing him in consultation for leukocytosis on 2/7/12. He had a number of labs done to further characterize this. Please see the enclosed labs from LabCorp done on 2/22/12 for the complete report. Of note his WBC was 12.5 (4.0-10.5), the differential was all within normal limits. His CMP revealed a glucose of 289 and ALT of 67 (0-55). The rest of the CMP was normal. BCR/abl was negative as was the JAK-2. Folate, Vitamin B12, ferritin, iron studies, retic ct were all normal. ESR was 1 and CRP was 1.2, both at the lower limit of normal.

At this point, his **leukocytosis (288.60)** appears not to be due to a hematologic problem, ie he does not have evidence of a primary bone marrow problem such as AML, MDS, CML or other MPD. I do think continued follow up is indicated to assure stability and Mr. Doran is comfortable with this plan. I will see him in 2 months and if his CBC remains stable I will increase intervals between visits.

Sincerely,

Monty B. Polonsky, M.D.

INITIAL CONSULTATION

PATIENT: DORAN, DANIEL
DOB: 6/4/66

DATE: FEBRUARY 7, 2012

Dear Drs. White and Mourani:

Thank you very much for referring Mr. Daniel Doran for hematology consultation. As you know, he is a 45-year-old plumber with a recent history of leukocytosis. He tells me it was first discovered in September when he was being seen because he wasn't feeling well and was weak like a "wet noodle," but besides that, no other specific complaints. He tells me his appetite has decreased a bit but not hugely. He has been trying to eat more healthfully. He has lost 15 pounds over the last four months, primarily from change in diet and not eating quite so much, which change he has attributed to his girlfriend. His energy level is moderately decreased as noted above, and this is his main complaint. No fevers, chills, sweats, nausea, vomiting, headaches, rapid change of vision. He does have some sweats when his gout is active and his diabetes is out of control but nothing severe. No new lumps or bumps.

ALLERGIES: None.

MEDICATIONS: Allopurinol, colchicine, various antibiotics of late, and as of last week he has been on prednisone for his gout, which is now resolved and is currently not active.

PAST MEDICAL HISTORY: Gout, diabetes mellitus, sweats when sugars are out of control. In 2006 he underwent bilateral mastectomies. Reviewing the pathology from Methodist Hospital, it was not actually mastectomies but bilateral breast tissue was removed, presumably from gynecomastia, which was becoming irritating and painful, especially while he was working.

FAMILY HISTORY: His father died of complications from diabetes mellitus with a CVA at age 78. He did have a history of colon cancer. His mother died at age 82 from complications of an infection.

SOCIAL HISTORY: He is widowed. His wife committed suicide in 2002. He has no children. His wife had four children, the youngest of which is living with his father. He has been dating someone for the last four years and is currently living with her in a one-story house with two steps to enter. Occasionally her adult daughter lives with them. Tobacco: Less than one pack per day for 30 years. Alcohol: Rare for the last three years, occasionally he will have a glass of wine with his wife. Prior to that he drank quite heavily, culminating three years ago with drinking a quart of vodka a day. He realized this was not healthy for him, and he quit drinking so much. He has a pet dog who weighs 45 pounds. He works as a plumber.

REVIEW OF SYSTEMS: Sweats that occur when his diabetes mellitus is out of control, which he usually controls by diet, and occasionally when his gout is out of control. Otherwise as per HPI, or is otherwise negative.

PHYSICAL EXAM: He is a well-developed, well-nourished white male looking to be healthy and vibrant.
VITAL SIGNS: Weight 179 pounds. Height 71". Pulse 94. O₂ saturation on room air 98%.
HEENT: Normocephalic, atraumatic. Pupils are equal, round and reactive to light. Sclerae are anicteric. Conjunctivae are normal pink without petechiae. Extra ocular muscles are intact. Ears externally normal with normal hearing. Nose externally normal with normal nares. Mouth is unremarkable.
NECK: Supple, full range of motion.
LYMPH NODES: None palpable in the neck, supraclavicular, axillary or inguinal areas.
BACK: Non-tender.
LUNGS: Clear to auscultation.
CV: Regular rate and rhythm.
ABDOMEN: Soft and non-tender, non-distended. Liver is palpable on deep inspiration.

DORAN, DANIEL

February 7, 2012

Page 2

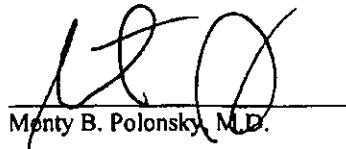

hepatosplenomegaly and no other masses appreciated.

EXTREMITIES: No cyanosis, clubbing, edema, cords or tenderness.

NEURO/PSYCH: Alert and oriented. Normal mood and affect. Ambulatory without abnormality. No obvious focality noted.

LABORATORY DATA: January 17th, white count 16.3, hematocrit 46.6, MCV 91, RDW 13.0, platelet count 254,000, differential is all within normal limits, neutrophils are normal at 6, lymphs 4.2, monos 0.9, eos 0.1. Of note, upper limit of normal of white blood cell count is 10.5. December 7, 2011 white count was 12.0, differential all within normal limits. At that time, BMP and hepatic function panel, except for a glucose of 145, were all within normal limits. September 23, 2011, white count 13.1, differential unremarkable. July 22, 2011, white count 12.1. January 11, 2011, white count 11.0, with what appears to be normal differential.

IMPRESSION: This is a 45-year-old gentleman with mild leukocytosis but normal differential. He does have a history of gout and diabetes mellitus. Gout may be present at a chronic low level causing mild stimulation of his white cells, causing them to be mildly elevated. In addition, patients with diabetes mellitus frequently have chronic infections at a subacute level and this may be causing mildly elevated white blood cell count. I have asked that he stop his prednisone soon, wait at least one week, get some labs done, and return to see me one week later. These labs are to include CMP, CBC, BCR-ABL qualitatively, iron studies including ferritin, JAK2, reticulocyte count, ESR, C-reactive protein, vitamin B₁₂, folic acid levels. Depending on these results, further evaluation will be considered. At this point, it appears to be a benign process but again we will await labs for further interpretation.

Monty B. Polonsky, M.D.

RE: Doran, Daniel

Dear Dr. White:

I saw Mr. Doran in followup. As you recall, I gave him Augmentin after his last visit and asked him to repeat his CBC, which continues to show leukocytosis. He mentioned that his abdominal pain is slightly better, but he still has some lower abdominal discomfort and constipation for which he uses Bentyl with some improvement.

PHYSICAL EXAMINATION: Vitals are normal. Weight 184 pounds. Abdomen is soft with periumbilical and left lower quadrant abdominal tenderness.

IMPRESSION:

1. Lower abdominal pain, likely functional and related to irritable bowel syndrome. The patient has diverticulosis, but there is no evidence of diverticulitis on colonoscopy or CT scan.
2. Persistent leukocytosis without response to antibiotics. I suspect bone marrow pathology should be excluded.

RECOMMENDATIONS: I asked the patient to continue Bentyl. I suggested fiber supplements on a regular basis. I referred him to see Dr. Polonsky for further evaluation of his mild leukocytosis. He will follow up with me in 6-8 weeks.

Thank you, Dr. White.

Sincerely,

SAMUEL MOURANI, MD

RE: Doran, Daniel

Dear Dr. White:

I saw Mr. Doran in followup. He continues to report left lower quadrant abdominal pain. The pain is intermittent without clear relieving or exacerbating factors. He also reports mild constipation. He tried trazodone, but that is causing lethargies, so he is not complaint with it. He mentioned that Bentyl offers some help. He denies any rectal bleeding.

PHYSICAL EXAMINATION: Vitals are normal. Weight is 182 pounds. Abdomen is soft with left lower quadrant abdominal tenderness.

Recent CT scan showed mild diverticulosis without obvious diverticulitis.

Laboratory data continues to show mild leukocytosis.

IMPRESSION: Persistent complaint of left lower quadrant abdominal pain associated with mild leukocytosis, although the patient had no obvious diverticulitis on CT scan. The possibility of mild diverticulitis cannot be completely excluded.

RECOMMENDATIONS: I suggested a course of Augmentin 875 mg twice a day for 10 days and also probiotics. I asked the patient to have a CBC done towards the end of the treatment and then followup with me in two weeks. I would like to see his white count decrease with above treatment. If leukocytosis persist despite above treatment, then further evaluation with hematological consultation will be required. I will keep you informed any further recommendations.

RE: Doran, Daniel

Dear Dr. White:

I saw Mr. Doran in followup. He is now reporting intermittent symptoms of abdominal pain occasionally in the periumbilical area and occasionally in the left side of the abdomen with some radiation to the back. There are also some reports of bloating and constipation. He denies any rectal bleeding. He denies any diarrhea or tenesmus. He denies any weight loss. He tried Bentyl, which tends to help his symptoms, but causes lethargy.

PHYSICAL EXAMINATION: Vitals are normal. Abdomen is soft with periumbilical left-sided tenderness.

IMPRESSION: Symptoms are likely related to irritable bowel syndrome.

RECOMMENDATIONS: The patient was reassured. I suggested trazodone 50 mg nightly. I ordered routine laboratory tests and a CT scan of the abdomen and pelvis to exclude any other significant pathology as a cause of his presentation. He will follow up with me in about three or four weeks. I asked him to keep me informed of his progress and any significant change in status.

Thank you, Dr. White.

Sincerely,

SAMUEL MOURANI, MD

RE: Doran, Daniel.

Dear Dr. White:

I saw Mr. Doran in followup. As you know, colonoscopy done six days ago showed a polyp in the proximal ascending colon, which was removed. The patient also was noted to have diverticulosis and internal hemorrhoids.

The patient is here for followup. Apparently, he woke up early in the morning yesterday with severe cramps and has been having significant problem with loose stools, tenesmus, and frequency. He also noticed some blood in the stool. He denies any nausea or vomiting. He denies any fever.

PHYSICAL EXAMINATION: Vitals are normal. Abdomen is soft with left-sided and periumbilical abdominal tenderness.

IMPRESSION:

1. Adenomatous colon polyp and family history of colon cancer.
2. Diverticulosis coli.
3. Diarrhea, tenesmus, and blood in the stool are likely related to Clostridium difficile colitis. The patient received ciprofloxacin recently and I suspect his presentation is most consistent with Clostridium difficile colitis. Diverticulitis should be kept in mind as a cause of this presentation, but I suspect this is less likely.

William E. White, MD
Re: Doran, Daniel
11/10/11 - Page 2

RECOMMENDATIONS: I started the patient on metronidazole 250 mg four times a day and asked him to start taking probiotics. He will take metronidazole for two weeks. I ordered stool for Clostridium difficile toxin. I asked the patient to call me after he does the stool test to discuss results and to update me on his progress. I also asked him to call me immediately if he notices worsening symptoms over the next 24 hours. I told the patient to expect improvement within the next 24-48 hours and complete resolution of symptoms within the next week.

The patient was advised to have a followup colonoscopy in three years.

Thank you, Dr. White.

ID #: 20718
Endoscopist: Samuel Mourani, MD
(s):

Dear Bill,

Mr. Doran underwent outpatient Colonoscopy on 11/04/2011

INDICATIONS:

- Family history of colorectal cancer
- Abdominal pain, LLQ

FINDINGS ON THE COLONOSCOPY:

Protruding Lesions: A single sessile 10 mm polyp of benign appearance was found in the proximal ascending colon. A single-piece polypectomy was performed using a cold snare. The polyp was completely removed. Grade 2 internal hemorrhoids were noted.

Excavated Lesions: A few diverticula were seen in the descending colon. Diverticulosis appeared to be of mild severity.

There were no complications.

IMPRESSIONS:

- Polyp in the proximal ascending colon (polypectomy)

10-1087011

- Diverticulosis of the descending colon
- Grade 2 internal hemorrhoids

RECOMMENDATIONS:

- High fiber diet and fiber supplement
- Dicyclomine Hydrochloride 20 mg - tablet (SIG: one po q 6 hours prn abdominal pain, Qty: 60, Refills: 1)
- Follow-up with Dr. Mourani in Arcadia office within 2-3 weeks
- Colonoscopy in 3 years

Thank you very much for allowing me to participate in the care of Mr. Doran.

Sincerely,

Samuel Mourani, MD

RE: Doran, Daniel

Dear Bill:

Thank you for asking me to see Mr. Doran. As you know, he is a 45-year-old man referred because of abdominal pain and family history of colon cancer. For the past two months, the patient has had intermittent pain in the left lower quadrant area without clear relieving or exacerbating factors. He describes associated constipation. He denies any rectal bleeding, although reports having some rectal bleeding about a year ago that resolved. He denies any fever. He was recently started on ciprofloxacin and metronidazole with minimal improvement. Recent laboratory tests showed mild leukocytosis.

PHYSICAL EXAMINATION: Vitals are normal. Abdomen is soft with left lower quadrant abdominal tenderness.

IMPRESSION:

1. Left lower quadrant abdominal pain. Symptoms could be related to mild diverticulitis. Colon malignancy should be excluded.
2. Family history of colon cancer. The patient's father was diagnosed with colon cancer in his 50s.

RECOMMENDATIONS: Based on above, I asked the patient to continue antibiotics and scheduled him for a colonoscopy towards the end of next week. I asked him to keep me informed of his progress and report any significant change in status.

Thank you, Dr. White.

Sincerely,

SAMUEL MOURANI, MD

NEGATIVE for the BCR-ABL1 *ela2*, *b2a2* and *b3a2* fusion transcripts
Interpretation:

The qualitative RT-PCR assay is negative for the *ela2* (p190) and *b2a2/b3a2* (p210) fusion gene transcripts. This result does not rule out a diagnosis of ALL, since BCR-ABL1 is involved in the etiology of only a subgroup of ALL patients. These results also do not rule out the presence of low levels of BCR-ABL1 transcripts below the level of detection of this assay, or the presence of rare transcripts not detected by this assay.

Additional Information:

The BCR-ABL1 fusion is found in virtually all cases of CML and in 15-30% of cases of ALL. This fusion gene is usually formed by a (9;22)(q34;q11.2) translocation, resulting in the fusion of the breakpoint cluster region (BCR) on chromosome 22 with the Abelson protooncogene (ABL1) from chromosome 9. The derivative chromosome 22 of this translocation is known as the Philadelphia chromosome. In the majority of CML patients, the breakpoint in the BCR gene is located in a 5.8kb region spanning five exons, *b1-b5* (exons 12-16), the major breakpoint cluster region (M-bcr). Most commonly, the breakpoint occurs in the introns following *b2* or *b3*, which join with ABL1 exon 2 (*a2*), forming the fusion transcript *b2a2* or *b3a2*. These chimeric transcripts encode a 210kDa BCR-ABL1 fusion protein, referred to as p210. In approximately 3% of CML cases, this gene fusion occurs without cytogenetic evidence of the rearrangement. In approximately 75% of Philadelphia positive ALL patients, the breakpoint in the BCR gene is located within intron 1, at the minor breakpoint cluster region (m-bcr).

Exon 1 (*e1*) of BCR joins with the ABL1 *a2*, forming the fusion transcript *ela2*, encoding a 190kDa BCR-ABL1 fusion protein referred to as p190. The remaining approximately 25% of Philadelphia positive ALL patients are found to be positive for breakpoints within the M-bcr.

Methodology:

<u>Test</u>	<u>Result</u>	<u>Units</u>	<u>Flag Reference Range</u>
-------------	---------------	--------------	-----------------------------

Comment: The principle use of this qualitative test is to confirm the presence of the BCR-ABL1 fusion gene transcript and to identify the particular breakpoint(s) present. Fluorescent in situ hybridization (FISH) and/or quantitative RT-PCR is recommended for quantitative post-therapy residual disease monitoring.

Total RNA was isolated from the provided specimen and subjected to reverse transcription-polymerase chain reaction (RT-PCR). Amplification products were monitored by real-time PCR using primers/probes specific for the e1a2 minor fusion transcript and the b2a2/b3a2 major fusion transcripts. An additional RT-PCR amplification of the ABL1 transcript was performed to control for cDNA quantity and quality. In-vitro studies have indicated that this assay has an analytical sensitivity that allows for the detection of approximately 1 cell containing the BCR-ABL1 fusion transcript in a background of 100,000 normal cells. All test results should be interpreted in conjunction with clinical and other laboratory findings for the most accurate interpretation.

JAK2 V617F Mutation Detection

Stage: Final

<u>Test</u>	<u>Result</u>	<u>Units</u>	<u>Flag Reference Range</u>
-------------	---------------	--------------	-----------------------------

JAK2 V617F mutation detection

Result: NEGATIVE for the JAK2 V617F mutation.
Interpretation: The G to T nucleotide change encoding the V617F mutation was not detected. This result does not rule out the presence of the JAK2 mutation at a level below the sensitivity of detection of this assay, or the presence of other mutations within JAK2 not detected by this assay. This result does not rule out a diagnosis of polycythemia vera, essential thrombocythemia or idiopathic myelofibrosis as the V617F mutation is not detected in all patients with these disorders.

Background:

JAK2 is a cytoplasmic tyrosine kinase with a key role in signal transduction from multiple hematopoietic growth factor receptors. A point mutation within exon 14 of the JAK2 gene (G1849T) encoding a valine to phenylalanine substitution at position 617 of the JAK2 protein (V617F) has been identified in most patients with polycythemia vera, and in about half of those with either essential thrombocythemia or idiopathic myelofibrosis. The V617F has also been detected, although infrequently, in other myeloid disorders such as chronic myelomonocytic leukemia and chronic neutrophilic leukemia. V617F is an acquired mutation that alters a highly conserved valine present in the negative regulatory JH2 domain of the JAK2 protein and is predicted to dysregulate kinase activity.

Methodology:

Genomic DNA was purified from the provided specimen. Allele-specific PCR using fluorescent primers was used to simultaneously amplify both the wild type and mutant alleles. Amplification products were analyzed by capillary electrophoresis. This assay has a sensitivity to detect approximately a 5% population of cells containing the V617F mutation in a background of non-mutant cells.

BCR-ABL1 RT-PCR, Qual CML/ALL

BCR-ABL1 RT-PCR, Qual CML/ALL 02
 NEGATIVE for the BCR-ABL1 e1a2, b2a2 and b3a2 fusion transcripts

Interpretation:

The qualitative RT-PCR assay is negative for the e1a2 (p190) and b2a2/b3a2 (p210) fusion gene transcripts. This result does not rule out a diagnosis of ALL, since BCR-ABL1 is involved in the etiology of only a subgroup of ALL patients. These results also do not rule out the presence of low levels of BCR-ABL1 transcripts below the level of detection of this assay, or the presence of rare transcripts not detected by this assay.

Additional Information:

The BCR-ABL1 fusion is found in virtually all cases of CML and in 15-30% of cases of ALL. This fusion gene is usually formed by a (9;22)(q34;q11.2) translocation, resulting in the fusion of the breakpoint cluster region (BCR) on chromosome 22 with the Abelson protooncogene (ABL1) from chromosome 9. The derivative chromosome 22 of this translocation is known as the Philadelphia chromosome. In the majority of CML patients, the breakpoint in the BCR gene is located in a 5.8kb

region spanning five exons, b1-b5 (exons 12-16), the major breakpoint cluster region (M-bcr). Most commonly, the breakpoint occurs in the introns following b2 or b3, which join with ABL1 exon 2 (a2), forming the fusion transcript b2a2 or b3a2. These chimeric transcripts encode a 210kDa BCR-ABL1 fusion protein, referred to as p210. In approximately 3% of CML cases, this gene fusion occurs without cytogenetic evidence of the rearrangement. In approximately 75% of Philadelphia positive ALL patients, the breakpoint in the BCR gene is located within intron 1, at the minor breakpoint cluster region (m-bcr). Exon 1 (e1) of BCR joins with the ABL1 a2, forming the fusion transcript e1a2, encoding a 190kDa BCR-ABL1 fusion protein referred to as p190. The remaining approximately 25% of Philadelphia positive ALL patients are found to be positive for breakpoints within the M-bcr.

Methodology:

Comment: The principle use of this qualitative test is to confirm the presence of the BCR-ABL1 fusion gene transcript and to identify the particular breakpoint(s) present. Fluorescent in situ hybridization (FISH) and/or quantitative RT-PCR is recommended for quantitative post-therapy residual disease monitoring.

Total RNA was isolated from the provided specimen and subjected to reverse transcription-polymerase chain reaction (RT-PCR). Amplification products were monitored by real-time PCR using primers/probes specific for the e1a2 minor fusion transcript and the b2a2/b3a2 major fusion transcripts. An additional RT-PCR amplification of the ABL1 transcript was performed to control for cDNA quantity and quality. In-vitro studies have indicated that this assay has an analytical sensitivity that allows for the detection of approximately 1 cell containing the BCR-ABL1 fusion transcript in a background of 100,000 normal cells. All test results should be interpreted in conjunction with clinical and other laboratory findings for the most accurate interpretation.

JAK2 Mutation Analysis, Qual

JAK2 V617F mutation detection 02
 Result: NEGATIVE for the JAK2 V617F mutation.

Interpretation: The G to T nucleotide change encoding the V617F mutation was not detected. This result does not rule out the presence of the JAK2 mutation at a level below the sensitivity of detection of this assay, or the presence of other mutations within JAK2 not detected by this assay. This result does not rule out a diagnosis of polycythemia vera, essential thrombocythemia or idiopathic myelofibrosis as the V617F mutation is not detected in all patients with these disorders.

Director Review:

Li Cai, PhD, FACMG 02
 Director, Molecular Genetics
 LabCorp Center for Molecular
 Biology and Pathology
 Research Triangle Park, NC
 1-800-533-0567

Background:

JAK2 is a cytoplasmic tyrosine kinase with a key role in signal transduction from multiple hematopoietic growth factor receptors. A point mutation within exon 14 of the JAK2 gene (G1849T) encoding a valine to phenylalanine substitution at position 617 of the JAK2 protein (V617F) has been identified in most patients with polycythemia vera, and in about half of those with either essential thrombocythemia or idiopathic myelofibrosis. The V617F has also been detected, although infrequently, in other myeloid disorders such as chronic myelomonocytic leukemia and chronic neutrophilic leukemia. V617F is an acquired mutation that alters a highly conserved valine present in the negative regulatory JH2 domain of the JAK2 protein and is predicted to dysregulate kinase activity. 02

Methodology:

Genomic DNA was purified from the provided specimen. Allele-specific PCR using fluorescent primers was used to simultaneously amplify both the wild type and mutant alleles. Amplification products were analyzed by capillary electrophoresis. This assay has a sensitivity to detect approximately a 5% population of cells containing the V617F mutation in a background of non-mutant cells.

Comp. Metabolic Panel (14)

Stage: Final

Result 9/29/2011 10:07:00AM WHITE, WILLIAM

Annotations: Comprehensive metabolic panel essentially normal except for blood sugar, fasting blood sugar is elevated

<u>Test</u>	<u>Result</u>	<u>Units</u>	<u>Flag</u>	<u>Reference Range</u>
Glucose, Serum	158	mg/dl	H	65-99
eGFR If NonAfricn Am	76	mL/min/1.73		>59
eGFR If Africn Am	88	mL/min/1.73		>59

Item Annotations 9/28/2011 7:12:00AM

Note: A persistent eGFR <60 mL/min/1.73 m² (3 months or more) may indicate chronic kidney disease. An eGFR >59 mL/min/1.73 m² with an elevated urine protein also may indicate chronic kidney disease.

Calculated using CKD-EPI formula.

BUN	25	mg/dl	H	6-24
Creatinine, Serum	1.15	mg/dl		0.76-1.27
BUN/Creatinine Ratio	22		H	9-20
Sodium, Serum	141	mmol/L		135-145
Potassium, Serum	4.9	mmol/L		3.5-5.2
Chloride, Serum	102	mmol/L		97-108
Carbon Dioxide, Total	20	mmol/L		20-32
Protein, Total, Serum	7.7	g/dl		6.0-8.5
Albumin, Serum	5.0	g/dl		3.5-5.5
Globulin, Total	2.7	g/dl		1.5-4.5
A/G Ratio	1.9			1.1-2.5
Bilirubin, Total	0.3	mg/dl		0.0-1.2
Alkaline Phosphatase, S	69	iu/l		25-150
AST (SGOT)	19	iu/l		0-40
ALT (SGPT)	22	iu/l		0-55
Calcium, Serum	10.1	mg/dl		8.7-10.2

Arcadia MRI & Imaging Center

3

16-1087611

Open MRI 1.5T Short Bore MRI Multi-Slice CT Ultrasound

638 West Duarte Road, Suite 2, Arcadia, California 91007 • Scheduling (626) 446-0080 Fax: (626) 446-0262

NAME: DORAN, DANIEL

DOB: 6-4-1966 (45)

DATE: 10-10-2011

CASE NO:

11-2830

REFERRING PHYSICIAN:

William White, M.D.

REC'D OCT 12 2011

INDICATION: 45-year-old male with generalized abdominal pain, most pronounced in the left abdomen. Evaluation for renal disease is requested.

RENAL/BLADDER ULTRASOUND

TECHNIQUE:

Renal/bladder ultrasound is performed with a 5 MHz curved transducer, on an ATL machine, and multiple images are submitted.

FINDINGS:

The bilateral kidneys appear within normal limits in size and morphology. The right kidney measures 10.8 cm in length x 5.3 cm AP x 4.6 cm transverse. The left kidney measures 10.4 cm in length x 5.5 cm AP x 4.8 cm transverse. There is no evidence of renal calculi, hydronephrosis, or renal solid mass lesion. Renal cortical echogenicity is homogeneous and symmetric.

No bladder calculi is shown. There is no evidence of focal bladder wall thickening or mass. There is a pre-void bladder volume of 90 cc. There is no post-void residual shown. Right and left ureteral jets are identified with color Doppler imaging without evidence of distal ureteral obstruction.

IMPRESSION:

Unremarkable renal ultrasound. There is no evidence of renal calculi, hydronephrosis, or renal solid mass lesion.

Thank you kindly for referring your patient to our office.

DOB: 6-4-1966 (45)

DATE: 10-10-2011

CASE NO:

11-2830

REFERRING PHYSICIAN:

William White, M.D.

INDICATION: 45-year-old male with generalized abdominal pain most pronounced in the left lower quadrant. Evaluation for gallbladder disease or other abdominal abnormality is requested.

ULTRASOUND OF THE ABDOMEN

TECHNIQUE:

Ultrasound is performed of the abdomen with a 5 MHz curved transducer on an ATL machine, and multiple images are submitted.

FINDINGS:

The liver is within normal limits in size and morphology measuring 15.6 cm in length. No focal hepatic mass is shown. Hepatic echogenicity is homogeneous. The gallbladder is unremarkable without evidence of gallstone or gallbladder wall thickening. There is no evidence of biliary dilatation. The common bile duct measures 3.5 mm in transverse diameter.

The kidneys demonstrate normal size and morphology bilaterally. The right kidney measures 10.8 cm in length. The left kidney measures 10.4 cm in length. The spleen is normal in size and echogenicity measuring 11.0 cm in length.

The pancreatic body is unremarkable. The pancreatic head and tail are not well-characterized secondary to overlying bowel gas. The abdominal aorta is not enlarged.

IMPRESSION:

1. There is no evidence of gallstone or biliary dilatation. No focal hepatic mass is shown. The liver appears within normal limits in size and morphology.

2. The pancreatic body, spleen, and bilateral kidneys appear within normal limits.

Thank you kindly for referring your patient to our office.

REFERRING PHYSICIAN: William White, M.D.

CONSULTATION REPORT ON: Daniel Doran
Birth Date: 6/4/1966 (45 yrs)
16-1087611

CHEST - PA AND LATERAL:

CLINICAL HISTORY: History of smoking.

The bony thorax and soft tissues are normal. Heart size and great vessels are normal.

The heart is not enlarged. The lung fields are clear. The costophrenic sulci are clear. The trachea is midline.

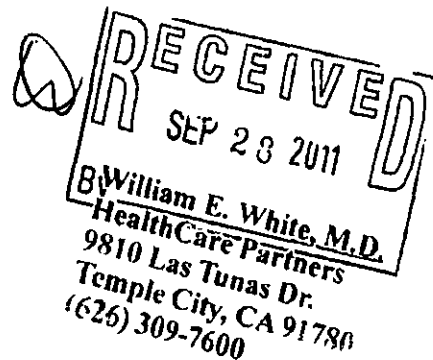

IMPRESSION:

Normal chest.
