## FOLLOW-UP REPORT AND REQUEST FOR AUTHORIZATION OF A PRIMARY TREATING PHYSICIAN

We reviewed the AME report of Dr. Mouradian under separate cover. We attempted the left knee cortisone injection per Dr. Mouradian's recommendations at the last visit on March 8, 2021. Unfortunately, the patient reports very little benefit. As a result, we will proceed with Dr. Mouradian's recommendations to evaluate for total knee arthroplasty. It was his opinion that if the patient obtain little benefit from the intraarticular injection that a arthroscopy should be avoided. **We are therefore making the request for authorization for knee specialist for further evaluation of the left knee arthroplasty.**

Physical examination showed spasm, tenderness and guarding in the lumbar spine. Left knee had patellar crepitus on flexion and extension with medial and lateral joint line tenderness. Positive McMurray's tests were noted bilaterally at both the medial and lateral compartments. Left shoulder has healed incision at the site of the surgical intervention impingement and Hawkins signs with range of motion in flexion to abduction to approximately 100 degrees.

Her current medications will be refilled.

Work restrictions will continue per the previous visit. She is on temporary total disability and will return to my attention in six weeks. It
